Best NFT Marketplace To Buy And Sell Non-Fungible Tokens

Top NFT Marketplace for Metaverse

Bell, California Jan 24, 2022 (Issuewire.com) - XANALIA is one of the Top NFT marketplaces for NFT trading, and the name of the marketplace is inspired by an Asturian mythological character XANA.

Wondering why?

Because it resembles most of the positive aspects of appealing character XANA, including:

- It presents extraordinary traits and beauty resembling with intuitive AR-VR functionality of XANALIA.
- The character promises to unlock treasures, which can be achieved via XANALIA trading on the platform.
- A beneficial spirit offering “Love Water” to the passengers, users are awarded specific rewards while adding liquidity to the XANALIA pool.

This mythological fairy is not harmful, and our best NFT marketplace XANALIA offers. full transparency to traders for avoiding the chances of loss.

Why did we build xanalia?

The exponential growth of the DeFi system and NFT marketplaces has created enormous opportunities in the virtual trading ecosystem. The adoption and awareness about the **non-fungible tokens** across the globe remarked the right time to develop the right ideas to build a robust NFT marketplace.

The idea behind launching a successful NFT marketplace, XANALIA, was to create a majestic and transparent NFT trading platform for the NFT creator, collectors, and traders. XANALIA, a decentralized NFT Marketplace, combined innovative features for VR/AR generation. Also, the popularity of the Binance Smart Chain adds fuel to the popularity of the XANALIA platform. It will be the best NFT marketplace offering speedy and low-cost transactions at the protocol level and inline operations. As this industry is still emerging, there is a bucketful of opportunities. If you have a passion for NFTs, collectibles, gaming, and blockchain, then perhaps you should consider XANALIA as the best platform to grow.

Xanalia Protocol:

NFT creators, liquidity miners, NFT traders can leverage the XANALIA marketplace to collect ALIA tokens as rewards, each representing their digital creatives on Binance Smart Chain as NFTs (Non-Fungible Tokens).

ALIA is our platform token that can be used for liquidity mining to earn rewards in the ALIA token itself. Moreover, it enables users to use our (XANALIA) platform’s other services.

Traders can participate on the XANALIA platform in the following ways:

- **Staker:** XANALIA allows users to swap their BNB tokens with ALIA tokens via the BNB-ALIA swapping pool on the pancakeswap. And then, users can stake their ALIA tokens to earn digital rewards in the form of ALIA tokens again.
- **Liquidity Miner:** Adding liquidity to the XANALIA liquidity pool allows users to yield more rewards.
- **Reward Generator:** Staking ALIA token or LP token allow traders to generate rewards
- **NFT Creator:** Even if you are not a trader or **NFT collector**, you can create NFTs and store them on the platform for traders to invest in them.

XANALIA supports two base tokens: BNB and ALIA — and integrates our leveraged XANALIA farming with PancakeSwap.

Here is an example for users to understand the process of the XANALIA ecosystem:

- Kat swaps the BNB tokens with ALIA tokens and stakes ALIA tokens on XANALIA; she added liquidity to the platform, and her tokens are available for a trader to borrow. For that, she gets rewards based on the liquidity pool share.

XANALIA smart contract ensures all the mechanics behind the trading process — optimally switching assets to the right ratio, providing liquidity to the pool, staking LP for XANALIA rewards.
