

Btektch Is Offering An Exclusive Range Of Syringe Barrels

Suzhou, Jiangsu Jan 4, 2022 ([Issuewire.com](https://www.issuewire.com)) - *At Btektch, they offer different dispensing products to fit your needs. In addition, they have recently launched an exclusive range of syringe barrels, including clear, amber, black, green, and more. Each one of them is designed for a specific purpose. So let's take a closer look at what each of us can offer.*

Btektch is the leader in precision dispensing and fluid management solutions. They manufacture and supply different products used for distributing adhesives, coatings, biomaterials, sealants, and other materials for fluid management; for test and inspection. Now they are offering a wide range of syringe barrels for industrial purposes.

The markings on the barrel show how much glue have been drawn. This is important because the laboratory must have a minimum sample to run the proper tests. Customers can choose different types to meet the working environment and work requirements. For example, a syringe barrel made by Btektch is high-quality aluminum alloy material with an integrated sleeve, prevents breakage, and provides high safety.

Their best-selling [Pressure Barrel Glue Syringe](#) comprises imported raw materials used to resist impact without adding any lubricant, release agent, electrostatic agent, to ensure that the glue does not solidify for a long time deformation. They are high-tech companies specializing in high-end two-component bond dispensing systems, dispensing products, and consumables.

Uses

American-style syringe cartridges are designed with a barrel body that adopts an imported thickening material, which can withstand situations that will make it easy to burst. The thread mouth is designed to ensure that the needle won't loosen. They come in three colors, with ten being the most suitable for UV adhesive and black for photocurable adhesive with UV protection.

Japanese style syringe cartridges are Syringe Barrels for a wide array of adhesives such as electronic packaging adhesive, solder paste, conductive adhesive, flux, and SM patch red adhesive. They come in colors like black, which is ideal for UV curing adhesives and other situations that require black shading. Green blocks ultraviolet light and visible light through three percent, making it suitable for long-term storage of UV glue. Amber-colored cartridges are for general UV protection workplaces.

Btektch is the leading dispensing system manufacturers. They have an option of custom-making dispensing products according to your requirements and specifications. Btektch has been manufacturing adhesive dispensing systems for so many years, and during this period, they have cooperated with a more significant number of partners, including local and international companies.

They would be delighted to listen to your needs and try their best to satisfy them. They are looking forward to hearing from you!
