

Double Glazed Tilt & Turn Windows – ClimateFrame Offers the Best Double Glazing in Perth

This Press Release is written to inform the readers that ClimateFrame offers the best double glazing in Perth, be it doors or windows.

Perth, Western Australia Jan 15, 2022 ([Issuewire.com](https://www.issuewire.com)) - Double glazed casement windows are a side-hung, outward opening style of window that allows directed airflow in your home whilst open. Climateframe casement windows are housed in a 67mm Kommerling outer-frame using quality stainless steel friction hinges. The tightness of the hinges is adjustable, allowing you to leave your window open without worrying it will slam shut if the wind picks up.

The sash and outer frame are internally reinforced with steel for strength and rigidity, allowing us to manufacture full-height windows and doors for you if glass frontage is what you're looking for.

Similar to the double glazed push-out awning style window, the double glazed casement windows come fitted with the same quality hardware – the sash is just hinged the opposite way around.

At ClimateFrame, they supply and install some of the highest quality double glazed windows in Australia. Learn more about [double-glazed windows and doors in Perth](#) by visiting
