

Launching New Lotus Fabric Kaftan

Melbourne, Australia Jan 29, 2022 ([Issuewire.com](https://www.issuewire.com)) - Eternally in Buddhist teaching, the **Lotus flower** symbolizes inner determination and spirituality. The lotus flower is a powerful representation of love, resilience, and perseverance. With the idea of introducing natural plant-based fibers offering sustainability, we at Modistas have created our line in pure bio natural **Lotus Fabric Kaftans**.

Our themes collections are designed by our creative team, and we pride ourselves on our premium quality kaftans with unique designs & styles. Every kaftan is curated with utmost love, affection, and craftsmanship complementing Modistas Pride, Passion, and Devotion to purvey nothing but the finest.

With Modistas we bestow the power in you to be the face, the driving force, the gamechanger draped in the purest form of fabric to bring the change our planet is looking for.

THE LOTUS FABRIC

Sustainability issues in Textiles have paved the way for many new fibres in the new and emerging term in today's life. Many new fibres are introduced to have an environment friendly future for the next generation. Lotus fabric is the eco-friendliest fabric in the world and is often referred to as 'sacred fabric'.

Lotus silk was first used to weave monastic robes as an offering to Buddha images or Buddhist monks. Lotus plants are pure in virtue as they emit this purity through their fibres. By wearing Lotus fabric, one feels calm, peaceful, and meditative. Lotus silk is one of the rarest fabrics in the world. This natural fibre is extracted by a few skilled craftspeople and is cut by hand to make silk like cloth in a special type of handloom.

The entire process of making Lotus fibre such as fibre extraction, yarn spinning, and fabric making is handled by hand. Each stem from the lotus tree is cut, flowers separated and the silk inside is extracted. Each stem contains a miniscule amount of thin, sticky fibres which are extracted and spun into yarn. The yarns are prepared for weaving by placing the skeins on a bamboo spinning frame and transferring the thread onto winders in readiness for the warping process. During the process of weaving, threads are frequently moistened with water, as lotus fibres need to be kept cool.

The fabric is woven in 100-yard batches, and it takes about a month and a half to complete one batch. It's estimated that around 40,000 lotus stems are required to make just 1 metre of fabric and 120,000 stems are required for one outfit, making the textile extremely exclusive. Due to its time-consuming production process and its unique qualities, lotus fabrics are quite expensive than conventional fabrics like linen or cotton. The final product is unlike any other fibre. It's soft, breathable like linen, and slightly elastic.
