

Pratham Software Celebrated 22 Years of Excellence

Saratoga, California Jan 22, 2022 ([Issuewire.com](https://www.issuewire.com)) - Pratham Software(PSI), a global IT Solution company, has successfully completed 22 years in the long-term journey of providing the best and optimal services. Back when it was launched about two decades ago, the company was a mere start-up. But as years passed, it was able to diversify its services and solutions. PSI expanded its business overseas to the UK, USA, Canada, Germany, and Australia, thereby making a global presence in the IT industry. Presently, the company is successful, with clients spread out in different countries and belonging to diverse industries.

On January 10, 2022, PSI held an event celebrating 22 years of its foundation. It was a virtual event due to covid restrictions and a ban on international flights. Despite having these restrictions, the event was successful. It brought back every employee on the same platform where they cherished the company's success and had quality time. Many have even expressed their joy, saying that this virtual event was far better than offline. The ambiance, feel, and enjoyment were maintained at the highest level.

The entire event was planned where all employees would feel welcomed, regardless of their post, role, or geographical location. One of the key moments was the thankful gesture the company heads delineated for their clients who have partnered with PSI and stayed by its side for more than 10 years. This gesture showed that PSI truly values their clients and are grateful for their years of support, trust, and credibility. The company heads even presented a speech, expressing how these clients have helped them grow and flourish to become one of the best IT companies globally.

Apart from thanking the clients, PSI also paid gratitude to the employees who have been working with the company for more than 15 years. These people have given their best to take PSI to a new level and displayed an excellent sense of passion and dedication. Due to their contributions, the company is now able to operate from so many different locations apart from its home country, India. On being asked, many employees told how special and honored they felt to be a part of this wonderful family. To say that

they were happy and delirious would be an understatement.

They were felicitated with the “15 Years Commitment Award”. The company heads have not only built a trustworthy and reliable relationship with the employees but also showed their appreciation through the award ceremony. This award was presented virtually to all the employees, both from India and overseas branches. It was another key moment of the entire event. The employees were then asked to share their experiences and how they evolved with PSI.

The main highlight of the 22-year foundation ceremony was the participation of all team members from different geographical locations. Employees from the USA, Canada, UK, Germany, and Australia attended the event and even participated. This was truly a sight to behold where the members reminisced old memories and even talked about remote working, challenges they are facing, and more. The leaders asked the team members about the working conditions, struggles they had to endure, and many such facts. This event had a brainstorming session where employees were encouraged to share their vision about the upcoming work culture and slowly and gradually normalize the conditions.

Towards the middle of the event, PSI heads declared their vision and goals for this upcoming year. In 2022, Pratham Software is looking forward to paying special attention and boosting both the performance and productivity of Cloud engineering services. So far, the company has dealt with basic client requirements like [Salesforce](#) solution, cloud engineering, offshore development web & mobile application development based on SaaS, IaaS, and PaaS, cloud architecture designing and management, and more.

But the team leads are considering expanding this line of services and offering more under the cloud engineering umbrella. They want to merge different cloud-based technologies like AWS, Azure, and more in order to streamline the services and make sure the projects are completed with more efficiency and better business results. New hiring might be done for expanding the cloud engineering team following the same principle of diversity and inclusion. With this, the heads from PSI have announced their prime goal of 2022 and brainstormed a few ideas about achieving excellence in the cloud service department.

Key roles and responsibilities will be handed over to the teams later on. As of now, they are planning to set up the infrastructure and work on training the in-house team that has already worked on cloud projects for the past couple of years. PSI doesn't want to risk anything, and with their vision, they are planning to achieve more success and generate the best results to meet their clients' expectations.

The event further focused on key areas where changes and development are required. For example, streamlining remote work culture and planning proper work timings have been discussed. Also, the business leaders have made a couple of more announcements regarding the plans for the upcoming year, the goals they have set and are planning to fulfill, and their ideas for innovation and evolution.

Pratham Software is a highly reputed company in India and other countries. It handles a long list of clients and always stays on time compared to the deadlines. With utmost dedication and passion, the company heads want to progress further with their employees and reach the zenith of success. The entire virtual event ended on a good note. All team members and the board of directors bid goodbyes with a smiling face and a sheer determination to display an excellent level of dedication towards PSI and their duties.

The 22nd formal foundation day celebration of PSI has been hugely successful, and there is no denial. Now, time will only tell what the company heads have stored for others and their clients. But with this

event, the employees came much closer to each other, just like a family. They delineated the picture of a perfect and motivated team who can tackle any kind of challenge or difficulty thrown their way.
