

Radiotronics UK Announces Unlimited Two Way Radio Range With Motorola Wave PTX

Motorola Wave PTX - Unlimited Two Way Radio Range

Nottingham, Nottinghamshire Jan 16, 2022 ([Issuewire.com](https://www.issuewire.com)) - Radiotronics UK, an authorised Motorola Solutions dealer, has announced an unlimited two-way radio range via the Motorola Wave PTX platform.

Unlike traditional two way radio systems that use standard point to point (antenna to antenna) or repeater (signal booster) based radio communications, the Wave PTX system utilises a combination of the mobile phone network and Wi-Fi to deliver a completely unlimited two-way radio range.

The Wave PTX platform used in the UK & Europe will roam every available network, meaning that users of Wave PTX in the UK & Europe can expect uninterrupted and always connected service.

Motorola Solutions has created two dedicated devices, a hand-portable radio called [TLK100](#) and a vehicular radio called [TLK150](#). The TLK150 vehicle radio can also be mounted on a power supply desk stand and used with a base microphone to create a base station two-way radio.

Motorola Solutions also offers users to use of their own smartphone, or either of Motorola's [LEX-L11](#) or [Evolve](#) devices, via the Wave PTX app; available for both Android and Apple iPhone smartphones.

Real time GPS tracking is achieved via the cloud-based dispatch console that's compatible with Chrome web browser and can be used on any Windows 10 PC or laptop.

Vivienne Francis, EMEA vice president channels at Motorola Solutions, [said](#): "Today more than ever organisations are looking for communication solutions to help them stay connected with increasingly mobile workforces. WAVE PTX brings together the simplicity of PTT communication with the richness of broadband to provide organisations with the ultimate group communications service."

[Motorola Wave PTX](#) is a zero-config system, meaning the end-user does not have to setup their two way radio. Radios are added and configured in the client's administration panel and delivered ready to use. Further, any future changes can be made without the client having to send their radio in for service.

Interoperability with an existing MOTOTRBO Capacity Plus two way radio system can also be achieved via a gateway.

Chris Jackson from Radiotronics UK said: "Like never before, Wave PTX from Motorola Solutions allows Radiotronics UK to deliver truly unlimited range to our clients. Europe-wide cellular coverage means our clients remain connected regardless of distance and real-time GPS tracking means transport managers and supervisors know where their staff and assets are. Wave PTX being remotely configurable means we can manage our clients' two way radios remotely without them having to visit our premises. Radiotronics is extremely pleased to welcome Motorola Wave PTX to our already comprehensive portfolio."
