

CN Cement Announces Launch of Operations in Canada

Company now accepting pre-orders for new, temperature-resistant cement polymer additive compound

Toronto, Ontario Feb 17, 2022 ([Issuewire.com](https://www.issuewire.com)) - CN Cement, a producer of a proprietary new additive compound for cement and powder mixtures, recently announced its plans to launch operations in the Canadian market. The entrance into Canada represents a strategic move for the company—to offer a cost-effective solution that extends the life of roads and other forms of infrastructure to a region that experiences some of the world’s most extreme weather.

CN Cement’s additive compound is comprised of cement nanoparticles and composite polymer binders that, when added to a cement mixture, act as a glue to increase strength and durability. The formula makes finished materials far more weather- and temperature-resistant compared to traditional mixtures. The composite can be added to a variety of raw construction materials, including concrete, pavement, asphalt, building coatings, and more.

“Canada was a natural choice in selecting where to launch our product,” said Dara Jamshidi, CEO and co-founder of CN Cement. “The extreme changes in temperature that the country experiences lead to dangerous potholes and other costly damages to its infrastructures. Our solution, which can withstand water, ice, and salt, can extend a road’s lifecycle from 15-25 years to 40-60 years. That’s a major improvement from both a sustainability and a cost-savings perspective.”

The technology was developed and extensively tested in Iran before the company decided to open its Canadian office. CN Cement’s founders, Dara Jamshidi and Nadiar Kargaranoroobi, have decades of combined experience in infrastructure, engineering, and construction in Iranian markets.

CN Cement is now accepting pre-orders for its additive compound from construction firms and contractors throughout Canada. For more information about the company, its product and benefits, or potential partnership opportunities, you can visit www.cncement.ca.

About CN Cement

CN Cement is the leading-edge provider of a proprietary additive compound that adds durability and useful life to cement and powder mixtures used in construction and public works. Developed in Iran and headquartered in Canada, CN Cement’s founders have spent decades working in infrastructure, engineering, and construction. The privately held company’s clients include construction firms, contractors, and municipalities. To learn more about CN Cement, visit www.cncement.ca.
