

Copper is like nature's botox – The Benefits of Copper in Skin Care

Los Angeles, California Feb 17, 2022 (IssueWire.com) - The only time you think about copper might be when you toss a handful of pennies into your change jar, but dermatologists say as a skincare ingredient, copper is worth its weight in gold. The metal has proven abilities to fight wrinkles, treat scars, and combat hair loss—making copper key to healthy, glowing skin. That's why the ingredient is showing up in more and more skin and hair products. Studies of copper peptides have shown that they can help reduce the appearance of fine lines and wrinkles by increasing collagen proteins, according to a 2015 research review. Over time, collagen may help to “plump up” your skin, reducing the appearance of wrinkles.

Copper has two key properties that are being exploited in consumer and medical device products in the last decade. On the one hand, copper has potent biocidal properties. On the other hand, copper is involved in numerous physiological and metabolic processes critical for the appropriate functioning of almost all tissues in the human body. In the skin, copper is involved in the synthesis and stabilization of extracellular matrix skin proteins and angiogenesis. With age, the skin undergoes vast changes, becoming wrinkled and rigid, losing its firmness, elasticity, tone, texture, thickness, flexibility, and moisture content. Skin aging is attributed to several changes. These include alterations in the dermal extracellular matrix (ECM) made up mainly of collagen (which provides strength and structure) and elastin (which provides elasticity and resilience) fibers.

Here are some of the benefits of incorporating copper into your routine. These benefits are brought to you by The Skin Curator.

The Skin Curator was created to fill a massive void in the beauty industry for luxury products with pharmaceutical level results with no harmful ingredients allowed! We bypass the marketing hype and empty promises of standard luxury brands by offering non-toxic “Hero” products that deliver every time. Curated from around the world, our collection of products is vetted from among the best in clean brands, tested by a team of skincare professionals, and approved by our pioneering and visionary founder, Annaliza.

Benefits of Copper in Skin Care

Stimulates Collagen & Elastin – Copper places a great role in the stimulation of collagen and elastin. In a nutshell, it acts as an energizer bunny to the cell. It gives it energy and has anti-inflammatory properties. The energy from the chopper forces the cells to get to work (kicked off the couch) rebuilding collagen and elastin.

Copper Helps Heal Tissues – It can also heal the tissues of the skin. Alone copper is great, but it works better with Vitamin A, Vitamin C, and Vitamins E. All of these vitamins are nutrients to replenish the cells, especially to the skin that is exposed to the sun, which is why we recommend adding GHK Cu to your collection of skincare products.

Copper Helps with Skin Tightening – As we age, we begin to lose skin firmness creating fine lines and copper is there to help with that. The anti-aging effect is helpful to the elasticity so that fine lines and wrinkles do not form and helps with the appearance of fine lines that may have already formed.

Copper Helps with Pigmentation – The benefit of copper in skincare helping with pigmentation was not well known until several years ago. Where it really plays a part, is when there are copper deficiencies.

The Skin Curator has identified a Powerful and Non-Toxic serum to get the perfect youthful look.

This Copper Serum is best in class and is called Dr. Pickart's 3% GHK Luxury VIP Serum.

This copper peptide serum performed best against 3 of the most popular copper peptide serums among skincare fanatics. What is GHK-CU?

It's is a molecule composed of a combination of amino acids and copper.

Why is that important? These ingredients are found naturally in the skin and keep your skin youthful. As we age, collagen formation slows down, resulting in loss of firmness, brown spots, and wrinkling of the skin.

So what's the secret? Adding Dr. Pickart's 3% GHK Luxury VIP Serum to your skincare routine can vastly improve the look of your skin. GHK-CU is known for its ability to "remodel" collagen giving more bounce to the skin and a smoother, more supple surface.

Copper is a trace chemical element, with the symbol "Cu" on the periodic table. Copper is essential for joint and bone health, energy levels, red blood cell formation, heart health, hormone modulation, and a strong immune system. It provides life-sustaining benefits to body tissues and organs, including the liver, brain, heart, muscles, and kidneys.

Copper is also a key component in collagen production. It makes up 75% of our skin composition

These are the results you can experience.

- Firmer skin
- Reduction in the appearance of fine lines
- Greater vitality and color of the skin
- Fading away of brown spots
- Greater clarity of the skin
