

Harvest Chronicle- Next-Gen NFT-Based Metaverse Simulation Game

Harvest Chronicle Is A Fusion Of DeFi and NFT

Singapore, Singapore Feb 21, 2022 ([Issuewire.com](https://www.issuewire.com)) -

GameFi combines the excitement of winning a prize with innovative crypto developments in what's called **DeFi**. Users of GameFi can trade, rent, or lend out their winnings. They can even borrow money against them. As its popularity grows, there's a debate about whether GameFi will change the

way people play games or just take their money. Some people have been borrowing to play on GameFi. It raises the possibility that GameFi could become a kind of digital sharecropping.

Harvest Chronicle- A Brief!

There are two technologies in Harvest Chronicle: NFT (Non-Fungible Token) and DeFi (Decentralized Finance). DeFi lets players purchase in-game assets. On the other hand, NFT lets players earn profits by playing for rewards (tokens).

Harvest Chronicle Goal

The Harvest Chronicle goal is to bring many people into the blockchain world and try out new types of games that use blockchain technology. It also has its specialized token called HCC (\$). It is an application-based and governance token based on the Smart Chain of Binance that will be used in many parts of the Harvest Chronicle game ecosystem and more.

Play-To-Earn Business Model

In many games, especially MMOs, players acquire digital items to advance. Such as weapons, armors, or other equipment. The items are normally obtained by completing challenges and quests or purchasing loot boxes with genuine money. You can customize your character with in-game currencies and skins, but none of them may be sold to players for cash.

It is where GameFi- Play-To-Earn Business Model comes in. Leveraging on the preservation of blockchain technology, game developers may develop in-game products and incentives that are indisputably unique and transferrable. The rewards include native digital currencies, staking, and NFTs. Once converted, coins can be exported into crypto wallets and sold to players via secondary markets or in-house trading platforms. This business model- Play-To-Earn, rewards participants for their effort and time.

Harvest Chronicle Business Model

In Harvest Chronicle, players can earn token awards that are required to breed more sheep and can be sold to other players.

Players that participate in its economy can add value to other developers and players. They get in-game assets in return. In-game resources and cryptocurrencies can be tokenized as digital assets on the blockchain. So the play-to-earn model is perfect for blockchain games in today's times.

Harvest Chronicle Coins

HCC (Harvest Chronicle Coins) is an application-based governance token for the HC ecosystem based on BEP-20. It can be used in many different ways and plays a big role in community and gaming governance.

Binance Chain was made to make trading on the non-custodial platform of Binance as fast as possible.

On the other hand, BEP20 is a set of regulations that all tokens made on BSC must follow.

Get Play-To-Earn Ready!

The Harvest Chronicle team includes blockchain experts and traditional game studios. In addition, it includes experts in operations, technological development, game creation, graphic design, and economics.

Harvest Chronicle (HC) will be the Next-Gen DAO Metaverse Simulation. It will connect all participants in GameFi so that gamers may truly “Play to Earn” on BSC. Based on NFT and BSC, it creates a shared value network and establishes virtual asset ownership.

Players may enjoy the game, contribute, and earn money to construct together. The HC team is receptive to community feedback, grows alongside players, and prioritizes player interests.
