Luis RH Williams has revolutionized the way that oil and gas can be extracted from wells in the United States. By modifying the equipment used, he's been able to lower costs while increasing production by 10%. Read on to learn more about his life and what you can learn from him when it comes to extracting oil and gas. The petroleum industry is a force to be reckoned with and over a century ago, drilling oil was no exception. In recent years, modern methods have made it possible to drill more efficiently and extract more oil. Luis RH Williams has revolutionized how wells are drilled, bringing down costs and cutting gas emissions by as much as 80%. This breakthrough has gone largely unnoticed but when you look at just how revolutionary his work is, it's easy to see why his name is up in the light. Now we need to ask ourselves: How can other industries learn from his successes? For centuries, people extracted oil from wells using pumps and elevators that consumed massive amounts of electricity. But that all changed after Luis RH Williams introduced some innovative new technologies. Nowadays, people can extract oil for less money than ever before—sometimes even for free! In just a few years, Mr. Williams has perfected his methods and is now looking to spread them across the world.

JTL Offshore Oil and Gas Servicing Pvt. – The world's leading producer of oil and gas well-stimulation services and equipment. In addition to being a global leader in good stimulation, JTL Offshore Oil and Gas Servicing Pvt. is also one of a select few companies capable of extracting petroleum and natural gas from almost any kind of undersea and rock formation. Based in Houston, Texas, JTL Offshore Oil and Gas Servicing maintains offices in many countries across North America, Europe, Africa, and Asia.
