

OpenSpace Expands into Several New Markets as e-Learning Booms

Ar-Riyad, Saudi Arabia Feb 9, 2022 ([Issuewire.com](https://www.issuewire.com)) - e-Learning has been around for quite some time and was even gaining popularity. With the outbreak of a global pandemic that made physical gatherings unsafe, e-learning practically exploded. E-Learning company OpenSpace plans to take full advantage of this development and expand its services into new markets.

e-Learning is without a doubt the future of education. Millions are touting their utility and convenience. Numerous distance education platforms have popped up and claiming their piece of the e-learning pie. With some of the most advanced educational technologies available, OpenSpace has no plans of being left behind.

The CEO, Hisham Almutairi has stated definitively that “We will expand in several markets.”

The company first started in the US market, expanded to the UK, and then to Saudi Arabia. They don't

intend to stop there. By definition, OpenSpace is a destination for all students, companies' owners, and institutions inside and outside the Kingdom, who seek knowledge through training, professional, and language developmental courses.

Having experienced substantial growth both financially and in the number of students who use the platform, OpenSpace has set out to bring its special brand of innovation and expertise to even more students in more places.

They bring to the table technologies such as behavioral analysis that senses when students are becoming bored or losing focus, an innovative and interactive whiteboard, the most advanced Learning Management System, an innovative assessment system, and 4K streaming technology. Almutairi is confident that these technologies will guarantee OpenSpace the success it craves.

They're also counting on the unique approach to learning offered by OpenSpace to pave the way for its entrance into new markets. OpenSpace focuses on fostering a learning environment that encourages positive interaction between students and teachers.
