

Utahn James Wolfgramm Helps with the Protection and Safe Rebuilding for the Kingdom of Tonga

Protection Rebuilding for the Kingdom of Tonga by James Wolfgramm

Provo, Utah Feb 7, 2022 ([Issuewire.com](https://www.issuewire.com)) - [James](#) Wolfgramm will donate 100,000 Honeywell masks and 100,000 boxes of FDA Nitrile Medical Gloves to protect the people of Tonga from the dangerous dust covering the Pacific Island Nation following the devastating volcanic eruption and Tsunami.

The eruption of the Hunga Tonga–Hunga Haʻapai Volcano was extremely massive and deadly that stunned the world when it sent a huge plume of gas, ash and other debris hurtling into the atmosphere last weekend. The mushroom brown explosion cloud flare was clearly visible in satellite images. In addition, James Wolfgramm will donate 120,000 specially prepared masks that have an EPA approved, long lasting, anti-viral material to protect Tonga, from aid workers who could be transmitters of the disease if they are allowed to arrive on the Islands.

Mr. [Wolfgramm](#) and his family have been long-time residents of Orem and active members of the Tongan community in Utah. He has been a serial entrepreneur focusing on developing “crypto” solutions and transactional computer applications as well as real estate investment and international trading. “My roots are in Tonga and with cooperation from the Kingdom, we will distribute our powerful, three-month, persistent disinfectant,” said [James](#) Niu Wolfgramm, Former Executive Advisor of Trilithon Global / Ohana company and active member of LDS Church.

Mr. Lord Fusitu'a, Chairman, GOPAC_Eng (Oceania), Chairman, CommonwealthSec Pacific Parliamentary Group On Human Rights, Former Member of Parliament Tonga,, commented, “We very much appreciate the many offers of assistance from the international community but, must continue to keep Coronavirus out of TONGA as our first priority. These donated, antiviral coated masks will make it possible for me to protect the people of Tonga as we begin to make arrangements for the many generous aid workers to render assistance as we safely rebuild the Kingdom.”

With Tonga being exposed to COVID-19 after the massive and deadly eruption of the Tonga–Hunga Ha‘apai volcano that stunned the world when it sent a huge plume of gas, ash and other debris hurtling into the atmosphere last weekend. The mushrooming brown cloud was clearly visible in satellite images. The volcanic ashes have also created major breathing issues for the citizens of Tonga.

The COVID-19 pandemic has continued to wreak havoc across the globe. With more than 35 million confirmed cases and several million deaths recorded according to a recent report from the World Health Organization (WHO), the novel virus remains a global challenge. Nations worldwide have continued to put in place measures to curb the spread of the virus and save more lives, with the South Pacific Island Nations toeing a similar line. While economies are gradually opening up following the steady decrease in the number of confirmed cases daily, it remains imperative to keep people safe to ensure the total eradication of the virus. Trilithon Global Inc. has, therefore, taken this cause to heart by donating PermaSafe disinfectant masks to several Pacific Island Nations.

Recently, the U.S. Environmental Protection Agency (EPA) released a list of EPA-registered disinfectant products that have nowadays qualified for the use against SARS-CoV-2, the novel coronavirus that causes COVID-19.

“Using the correct disinfectant is an important part of preventing and reducing the spread of illnesses along with other critical aspects such as washing your hands,” said EPA Administrator Andrew Wheeler. “There is no higher priority for the Trump Administration than protecting the health and safety of Americans. The EPA is providing this important public information in a transparent manner on disinfectant products to help eradicate and reduce the spread of COVID-19.”

Some products appearing on EPA’s list of registered disinfectant products have been qualified for use against COVID-19 through the agency’s Emerging Viral Pathogen program. This program allows manufacturers to provide EPA with data, even in advance of an outbreak, that shows their products are effective against harder-to-kill viruses than CoronaVirus SARS-CoV-2. This also allows additional communications intended to inform the public about the utility of these products against the emerging pathogen in the most expeditious manner.

Coronaviruses (SARS-COV-2) are enveloped viruses, meaning they are one of the easiest types of viruses to kill with the appropriate disinfectant product. Consumers using these disinfectants on an enveloped emerging virus should follow the directions of the product’s master label, paying close attention to the contact time for the product on the treated surface.

With this eco-friendly technology, James Wolfgramm hopes that this will help the war of COVID-19 Pandemic in the Tonga and other South Pacific Regions.
