WATERPROOFING IN THE BATHROOM

Water leaks and seepages are a common occurrence in toilets and bathrooms, especially in older homes. With water constantly seeping through the waterproofing layer of the bathroom floor, it will crack and decay.

To permanently prevent water leaks and seepage, you must seal the crevices. To complete the waterproofing of the floor, we use a chemical infusion treatment.

WATERPROOFING FOR TERRACE AND TANKS

Roofs and tanks are two places in your home where water leaks from internal water sources are likely to cause dampness. Asian Paints' Smart Care Waterproofing solution can keep your roof damp-proof. We are qualified waterproof contractors in Pune, ensuring that these solutions are correctly applied to prevent water from seeping into your terrace/ tanks, preventing them from needing to be replaced in the future.

WATERPROOFING IN THE INTERIOR

We provide economical waterproofing paint solutions for all types of severe and non-severe dampness concerns emerging from the interior, exterior, mortar/concrete surfaces of your property in Pune. Smart Care wall putty, Damp Block 2k, and other products can be used to treat water leakage/deposition issues and keep the interiors looking nice.

TILING

Water seepage and re-tiling are caused by the loss of joint fillers in tiles. SmartCare Tile on tile adhesives, polymer waterproof materials, and other treatments are available to keep the tile fillers from disintegrating while also preventing water seepage. Our waterproofing materials are simple to use, long-lasting, and dust-free.
