

What is CryptoShopping? Is it all that it is cracked up to be?

Los Angeles, California Feb 2, 2022 ([Issuewire.com](https://www.issuewire.com)) - First, let's get into what CryptoShopping even is...then we will make up our minds.

CryptoShopping allows over a thousand different cryptocurrencies to purchase items online and offers a selection of over 100,000 products to be bought on their store.

Here are some of the categories of products you can choose from.

There are in fact not one but three ways to buy products on CryptoShopping. The first method is it has created a marketplace where vendors can upload their products to sell for over 1,000 different cryptocurrencies

The second method is it has created an NFT marketplace where vendors can sell their items/services as NFT's. buysellnft.cryptoshoppingstore.com

The third method is it has created a Metaverse where people can add products to sell on CryptoShopping metaverse. Metaverse.cryptoshoppingstore.com

CryptoShopping is about bringing the crypto community together and bolstering the online presence of this crypto movement. Cryptocurrency for it to survive needs more real-world utility and that's exactly what Cryptoshopping is providing. Cryptocurrency for the first time can be used to purchase real-world items.

What else is there to know about CryptoShopping?

There is a tremendously lenient policy when it comes to our refund, resend, and returns.

We also want to grow the number of items on our website which we sell. We are aware that there are a lot of crypto fans out there that would love to sell their own products on our website to make crypto.

As iterated above CryptoShopping accepts over 1,000 cryptocurrencies on their platform. Including our own native “Cryptoshopping” Token which is native to our platform. If you use the “Cryptoshopping” token on our platform you receive an additional 10% discount on your purchases

For the NFT marketplace on BuysellNft.cryptoshoppingstore.com we only offer BSc smart chain payment in the form of BNB. We decided against using ethereum as the gas fees are way too high whilst bscchain the fees are close to \$0

So what is the verdict for CryptoShopping? Well it is still a relatively new project and a lot can happen in such a tumultuous crypto market but the project looks extremely promising if this team can continue to work hard and keep growing the project.
