**New Delhi, Delhi Mar 3, 2022 ([IssueWire.com](http://IssueWire.com))** - CICO Group proudly manufactures some of the industry's favorite hyper-plasticizers, having the marked capacity to go beyond 40% water reduction. Our commitment extends beyond product performance; our custom products are so efficient that they translate into savings for the client in the long term.

Our experienced team is committed to solving your most formidable concrete challenge with unparalleled efficiency in time & cost. Moreover, we employ talented specialists and leverage the latest technologies, which enable us to fulfill our client's unique set of requirements. So be it M20 or M90, early strength or later strengths, workability or flowability, self-compaction or self-leveling, compressive strengths, or flexural strengths.

Cico Group [concrete admixture manufacturers](#) offer a comprehensive range of innovative solutions for ready-mix concrete at the plant or on-site and a wide range of solutions to cover all wet cast and dry cast requirements. Our solutions are dedicated to improving concrete performance, production, workability, aesthetics, and sustainability.

We design, produce, market, and deliver our systems and solutions for concrete producers and users worldwide.

- **Extend concrete workability**

Cico provides solutions to extend the workability of concrete with limited impact on early strengths. CHRYSO developed very high-range water-reducing superplasticizers to deliver better strength and an improved finish of the fresh concrete.

- **Concrete pumping optimization**

CICO deploys new solutions to increase long-distance and vertical concrete pumping to answer new construction challenges such as high-rise buildings or underground structures.

- **Improve concrete playability and finish ability**

CICO [construction chemical suppliers](#) combine mixed design know-how and new concrete solutions to deliver exceptional fluidity, a rapid filling of complex molds, and an excellent surface finish quality.

If you are a professional construction searching for the best building products, give us a call now. We are the best suppliers of admixtures.

An admixture is a unique material used as an ingredient for cement or mortar. This particular chemical reduces thermal cracking. Its work is to regulate the setting and early hardening process of concrete.

Hydration of cement generates heat (exothermic process). As it cools down, it contracts. If a temperature differential of 35 degrees Fahrenheit within 1 foot of cement is reached, cracking could occur. This could quickly happen as concrete's temperatures rise from 20 degrees to 50 degrees Fahrenheit hotter than average temperatures in one full day of placement.

This is where admixture-based chemicals can work wonders. They could alter the rate of heat generation and reduce the likelihood of cement cracking.

CICO Group [construction material manufacturers](#) are one of the top manufacturers in India. If you need us to answer some questions, write us an email or make a call. Concrete chemistry has advanced considerably over the past 25 years. Modern concrete admixture formulations rely on increasingly complex and specialized raw materials, yielding products tailored to specific construction environments and concrete production circumstances.

Expanding range of raw materials provides our customers with a proven platform for formulating high-performance concrete admixtures. Further details can be found at right. The aim is to develop our Sales and Technical staff to be experts in technology and its application in Concrete Admixture formulations. Expertise means not only satisfying the current needs of the Concrete Admixture Industry.
