Egtved, Vejle Mar 28, 2022 ([Issuewire.com](https://www.issuewire.com)) - A digital caliper is a precision instrument that is used for taking accurate measurements. They have been around for centuries and are considered one of the most effective measuring tools. With various types available, calipers can serve different functions, such as measuring the inside diameter, outside diameter, and pitch diameters of the screw threads. Also, they have several components that go into their overall function and design. They have an LCD display that shows the measurement on a digital screen, inside or outside jaws measure the diameters, a thumbwheel moves the jaws up and down, and the main scale.

Unlike vernier and dial calipers, digital calipers can change from metric to an inch and vice versa simply by a press of a button. In addition, there are a few accessories that can help you get more out of your calipers including insert holders and caliper pressure devices. Pressure devices make accurate, repeatable caliper measurement easy. If you are looking for a reliable company offering good quality

Measuring threads is common especially when setting up the machine. Making a mistake about inexpensive items is not only costly but also a cause for concern. All types of internal and external thread pitch diameters can be measured using their thread inserts. Further, insert holders can be made for any caliper jaw length and thickness. Interestingly, their thread inserts fit all holders. When their probe bushes are mounted on insert holders, a standard digital caliper becomes a multifunctional measuring tool for both internal and external diameters.

Among other accessories, a center stop is useful when measuring several threaded components. The newest innovation is a caliper calibration tower. It can be used to calibrate calipers and also as a training tool for new beginners. The firm also offers special inserts for measuring specific O ring grooves and specific pitches. Thus, when looking for precision measuring equipment, **Flexible Measuring Systems** is there to assist you in reaching your goals.
