Great news for people looking to make a successful career in the field of ethical hacking! Hacker School now offers an excellent QRadar training course online t

Bengaluru, Karnataka Mar 22, 2022 ([Issuewire.com](https://www.issuewire.com)) - Great news for people looking to make a successful career in the field of ethical hacking! Hacker School now offers an excellent **QRadar training** course **online** to make it easy for every student to access high-quality study materials.

With the rapid advancements in digital technology over the last few years, cyber security threats have also increased significantly. For this reason, regardless of the industry, business organisations look for sophisticated digital security solutions, which have, in turn, created a high demand for security professionals.

The security team constantly carries out security incident management, security monitoring, network flow monitoring, and vulnerability management, thus identifying potential threats to develop strategies accordingly. These tasks require theoretical knowledge and industry-oriented training.

When asked about this IBM QRadar training course, an official responded - *"In our SOC analyst course, a student will get the opportunity to know the main features of QRadar from an analyst and a SIEM perspective. They will learn many things, including user management and rule creation. In addition to the SIEM basics, we also provide training in IT operations analytics using QRadar so that students can learn about flows, event management, filters, correlations, and offences. At Hacker School, we aim to make our students job-ready."*

Because their [QRadar training is offered online](#), students join the session from the comfort of their

homes. They only need a stable internet connection. Students who work part-time in other companies find this online model highly beneficial because it helps them avoid interfering with their daily work schedules. Once the session is over, students can access uploaded class materials and recorded live sessions.

Candidates willing to join this course program must have some background knowledge in Linux and Windows programming, Regex, elementary networking concepts, and the basics of IT security.

While internet usage in the industrial sector has helped many companies improve their performance, it has made the respective systems vulnerable to outside attacks. This is why top companies with a distinct IT infrastructure have started investing considerable amounts in the cyber security sector. People with advanced training in the Security Operations Centre (SOC) can quickly get jobs.

The official also added - *“Students will get the opportunity to learn security basics from some of the top certified trainers. More than 60 hours of live training sessions will equip them with all the necessary skills and qualifications to build the best defence line against cyber attacks. We also provide cloud lab facilities for students with limited hardware access.”*

About the School

Hacker School is a Cartel Software Private Limited unit and has provided high-end network security training programs to aspiring candidates for over several years. They have a wide range of cyber security courses and EC council certification courses offered both online and in-person.
