

Learn More About Cosmetic Dentistry Near You

Wildwood, Missouri Mar 7, 2022 ([Issuewire.com](https://www.issuewire.com)) - If you're interested in learning more about cosmetic dentistry in Cottleville, MO, here's a brief explanation of the three most frequent operations. Of course, a cosmetic dentistry clinic near you will perform other operations, but these are the three most common treatments.

Cosmetic Teeth Whitening

Cosmetic teeth whitening from our Cottleville, MO dentist, at Cottleville Smiles, is the most frequently requested procedure for a smile makeover. There are several reasons why individuals seek expert help for whiter teeth. For starters, the substances used in professional whitening treatments are more effective than those found in over-the-counter (OTC) or internet goods. Second, the process is more effective than over-the-counter medications in protecting your teeth's enamel. Third, the outcomes may be planned and delivered within a particular timeline - something that OTC can only offer!

Cosmetic Dental Veneers

Do you want a straighter smile or to close minor gaps between your teeth? Do you want to see improvements faster than aligner treatment can provide? If this is the case, cosmetic dental veneers should be explored. If you've ever seen someone with a flawless smile, they've most certainly been wearing dental veneers. Why are they so popular? Because they can address a variety of facial issues such as:

- Teeth discoloration
- Interdental spaces
- Teeth chips and cracks
- Teeth Dimensions

Dental aligners may fix some of the issues listed above, but they take a minimum of six months of treatment time. A cosmetic dentist in Cottleville, MO, on the other hand, can put dental veneers in as little as one or two appointments. Another option for correcting stained teeth is dental crowns.

Cosmetic Tooth Bonding

Cosmetic tooth bonding, like dental veneers, is used to swiftly address minor facial flaws. When you see our dentist near you, you'll learn more about dental bonding and how it differs from dental veneers; the key distinctions are durability and cost. Bonding is less costly than dental veneers, but it is not as sturdy as the materials used in porcelain or composite resin veneers.

The Takeaway

Whether you desire a whiter smile quickly or a better smile without the hassle of clear aligner therapy, [cosmetic dentistry](#) has a solution for you! Explore the advantages right now!
