

Music Creator and Film Producer Felix Kay Launches "Kanashii Girl" NFT

Los Angeles, California Mar 31, 2022 ([IssueWire.com](https://www.issuewire.com)) - "Kanashii Girl" (カナシィガール, pronounced Kah-Nah-sheeee, Japanese for sad) lo-fi NFT (non-fungible token) music collection, is now on the market.

Felix Kay, music creator, writer, and film producer launched the collection early this week, starting his journey into the NFT world.

The artwork which features the "**Kanashii Girl**" infuses pastels and retro colors, which is inspired by his music. But the true value of the NFT comes from the **lo-fi music** clip that is attached to each piece of "**Kanashii Girl**" art. These lo-fi music clips are exclusive only to this collection.

"The idea to get into NFTs never crossed my mind until recently when someone asked me to commission three lo-fi music clips for their NFT collection," said **Felix Kay**. He went on to say,

*"After completing that project, I thought to myself, that was kind of fun. I should try it for myself, so I did, and the "**Kanashii Girl**" NFT collection was born. If someone likes what I'm creating, great, but I didn't do it for fame or clout. I made the clips for fun. And now that I see what I created, I kind of want to keep them."*

What is an NFT?

Digital Asset - NFT is a digital asset that represents internet collectibles like art, music, and games with an authentic certificate created by blockchain technology that underlies Cryptocurrency.

Unique - It cannot be forged or otherwise manipulated.

Exchange - NFT exchanges take place in cryptocurrencies such as Bitcoin on specialist sites.

Where to buy it?

The "**Kanashii Girl**" collection is currently available on **OpenSea** (link below).
