

Parkopedia expands its parking data services into new industries, starting with Sunny Cars

Parkopedia's global parking information will be delivered to Sunny Cars drivers in the Sunny2go web application

London, United Kingdom Mar 3, 2022 ([IssueWire.com](https://www.issuewire.com)) -

- Parkopedia's global parking information will be delivered to Sunny Cars drivers in the Sunny2go web application
- During their travels, drivers can now choose from over 70 million parking spaces, across 89 countries
- As the global leader in digital parking services, Parkopedia continues to expand its supported industries across mobility, transportation, and logistic service providers

Leading connected vehicle services provider, Parkopedia, has partnered with Sunny Cars, one of the largest rental car specialists in Europe, to provide parking information to their drivers, via the 'Sunny2go' web application.

Parkopedia helps millions of drivers to find parking every day, and will now provide Sunny Cars customers with parking information for both street and car park locations across 89 countries worldwide.

Parkopedia gathers extensive information about every parking location, including the precise position,

the number of spaces, prices, hours of operation, electric vehicle charge points, height restrictions, and more.

Parkopedia's dynamic data, which will be added to the app later this year, uses a combination of real-time data and sophisticated predictive algorithms to determine parking space availability at any given time. This gives drivers a 'local knowledge' of parking during their travels, providing occupancy insights, as well as the probability of finding parking at a destination.

Sunny Cars is a car rental specialist, and rather than owning vehicles directly, works with selected fleets from all over the world, with more than 8,000 locations in over 120 countries. The Sunny2go mobile app, now featuring Parkopedia's parking data, is provided to customers 14 days prior to vehicle rentals via a unique link to act as a 'personal concierge service' with features such as a free telephone concierge, map functionality, holiday checklists, and all booking information for their trip.

As the leading connected vehicle services provider, Parkopedia welcomes the expansion of its digital parking services into the mobility, transportation, and logistics industries, using accurate and complete parking data to provide support for a range of services, from parking for car rental customers and holidaymakers, to creating greater efficiencies for last-mile delivery drivers.

Hans Puvogel, COO of Parkopedia, commented: *"Our parking information will provide an integral part of Sunny Cars' extensive, 'all-around carefree package'. Travellers utilising Sunny Cars' services, typically have the greatest demand for local knowledge and support for services such as parking whilst on their journeys, so we are pleased we can help ensure positive customer experiences. As part of the continued expansion of our parking services, we are confident that our market-leading accurate and complete parking data will support an even greater number of drivers globally and we are actively welcoming further integrations from mobility companies and the associated industries."*

ENDS

Notes to Editors

Parkopedia was recently recognised as the provider of the most accurate and complete parking data in separate studies in both the US and China. Additionally, alongside traffic and weather, parking was established as the most requested driver information service for drivers. Parkopedia provides automakers, as well as transportation and logistics companies, with an unrivaled parking data set - essential for positive current, and future, in-car user experiences, and connected vehicle services.

About Parkopedia

Parkopedia is the leading connected car services provider used by millions of drivers and organizations such as Audi, Apple, BMW, Ford, Garmin, GM, Hyundai Kia, Jaguar Land Rover, Mercedes-Benz, Peugeot, Sygic, TomTom, Toyota, Volkswagen, and many others. Parkopedia helps drivers find and pay for parking, EV charging, fuelling, and tolls in 15,000 cities across 89 countries. Parkopedia is also developing highly detailed parking maps and corresponding algorithms to help drivers and self-driving vehicles navigate to an open parking space indoors.
