

PixelPlex Communicates More Information on Its Ethereum Development Service

PixelPlex helps transform business tools for more efficiency with its Ethereum network development process.

New York City, New York Mar 16, 2022 ([Issuewire.com](https://www.issuewire.com)) - PixelPlex, a customer-centric blockchain company, provides the latest information on its Ethereum dapps development services. The company aims to make businesses more tech-inclined through the implementation of Ethereum-powered enterprise-grade systems.

The company pledges its commitment to making the most out of the Ethereum toolkit and ensuring that businesses are well aligned to achieve their utmost goals fast — irrespective of their corporate size. PixelPlex does this by helping companies build & deploy smart contracts; preventing malicious attacks & data fraud; preventing downtime; streamline data-rich processes.

PixelPlex Ethereum development services aid fintech providers, banks, vendors, and institutions to make their aspirations a reality. It approaches every issue with care and comes up with a cost-effective, elegant, and valuable solution that solves both technical and business problems.

PixelPlex offers solutions through Ethereum consulting; [Ethereum app development](#); and solution audit & support. According to the company's business development team, a partnership with PixelPlex guarantees an outstanding delivery.

Within over 9 years in the blockchain domain, PixelPlex has developed over 80 DLT projects and has discovered over 800 vulnerabilities in the smart contracts they have audited. The company has also helped clients save over 15% on transaction fees thanks to contract optimization.

PixelPlex has demonstrated an apt understanding of the ins and outs of the network. Thus, ensuring clients enjoy tangible financial gains and smooth digital transformation. Some domains where PixelPlex has proven its expertise are logistics; fintech; healthcare; real estate; construction; and the sharing economy.

On its website, there is a gamut of Ethereum-based projects, which includes Miniwager, a decentralized gaming platform built primarily for PvP tournaments and games. Another Ethereum related project in its portfolio is KickICO, a smart contract-powered platform for crowdfunding. Clients have raised over \$500M+ via the platform.

PixelPlex follows a strict process to replicate its success within all projects it handles. The company first undertakes a careful business case analysis, then carries out the app design and architecture development. Other processes include smart contracts engineering; UI/UX design; full-cycle QA; and DApp deployment & updates.

About PixelPlex

PixelPlex is a company founded in 2007, with the primary aim of using technology to ease seemingly complex business processes. It has delivered over 450 projects in blockchain, custom software development, and the Internet of Things.
