

PixelPlex Provides Some Catchy Information on Its Cross-Platform App Development Service

PixelPlex reveals highly vital details about its capacity to partner in bringing app ideas to life with its professional cross-platform development team.

New York City, New York Mar 18, 2022 ([Issuewire.com](https://www.issuewire.com)) - PixelPlex, a mobile app development company, recently gave some updated information on its **cross-platform development** service. The company has an impressive track record of designing, developing, and launching industry-specific solutions across all scales and industries. They are a vital link for clients in need of custom cross-platform applications, and technologies that can provide a vital edge over competitors.

PixelPlex has a team of app developers that have an intrinsic understanding of tech stacks, frameworks, and constraining regulatory practices. They've mastered requisite skills for intuitively boosting engagement rates for their clientele while ensuring that technical blueprints are adhered to.

To guarantee optimum satisfaction rates for clients and their target users, PixelPlex develops intuitive solutions with business logic that fully address corporate goals. The team is properly seasoned and highly motivated and can jump-start a project within a short period, while being prudent enough to minimize both developmental and operating costs.

The company's cross-app [development team](#) ensures that its solutions don't require additional computational resources to deploy to any platform. Beyond this, the team also ensures extended exposure; fast time-to-market rate; native-like experience; easy cloud integration; and reduced development costs.

According to the CEO, Alexei Dulub, PixelPlex adheres to a strict development process for cross-platform apps by sticking to a failure-proof workflow. This workflow consists of a discovery & strategy phase; then UI/UX design; and solution prototyping. The team then moves to the engineering phase; and finally QA & support.

Some projects in PixelPlex's portfolio give testament to its efficacy. An example of such is CTRL: a cross-platform application that helps clients control power consumption and efficiency across industrial and residential premises. The platform captures processes, hosts, and visualizes sensor information via an interconnected enterprise framework.

About PixelPlex

PixelPlex is an intuitive custom cross-platform app development company with an impetus for creating timely and effective solutions for all client types. PixelPlex has a 4.9 rating on Clutch and has developed more than 80 slick & sound mobile apps.
