

Silicon Valley SmarterKids Technologies launched SmarterKids Online Math & Chinese Class

- the world's first Smart Online Class hosted by top teachers of family child education.

Palo Alto, California Mar 24, 2022 ([IssueWire.com](https://www.issuewire.com)) - Silicon Valley SmarterKids Technologies, Inc. has officially released its first smart online course, in the Apple App Store and Google Play, hosted by top teachers of family child education, which is a ground-breaking teaching system for self-motivated learning. It uses immersive systematic teaching methodology to form the unique innovative curriculum. The course teaches more than just how to solve problems and knowledge. Instead, it helps children develop the important habit of self-motivated learning. It uses a holistic system to build a children's thinking and behavior system so that they can benefit from it for life. This is the most fundamental difference between SmarterKids programs and those of other teaching institutions.

The SmarterKids program has four unique advantages:

First, this program is the only one on the market taught by a top teacher who attended elite schools from kindergarten to graduate school. All teaching materials are personally reviewed by top teachers to ensure that the most advanced teaching concepts and the best methods are used to teach the children, resulting in a reliable and effective educational product.

Second, the SmarterKids curriculum integrates the U.S. Common Core curriculum system standards,

the innovative child education concept of Stanford University's play-based learning, and China's "Guidelines for Children's Cognitive Development." Through the joint research of experts in Silicon Valley and Beijing, China, it grew into the advanced "immersive teaching method" based on child psychology. As a result, it produces superb attention from the children, encouraging the most effective teaching results. This is the most valuable and exclusive scientific research achievement of the SmarterKids program. And, it is also the implementation concept of SmarterKids' Stanford-style talent development system.

Third, the SmarterKids program allows the children to learn more than they would from other products or classes, which are value-added gains on all-around education. For example, he/she will play a significant role in the interesting adventure world SmarterKids created for him/her, where he/she will gain quality education, such as responsibility, kindness, and helpfulness; EQ education (such as the establishment of a will, being brave, strong, resilient, not afraid of difficulties and teamwork spirit); and common sense education, including common knowledge and the laws of nature. For example, he/she will learn how to develop good hygiene habits from childhood and how to protect their eyes; he/she will know the smallest fish and the deepest trench in the world; they will learn about plants from seedlings through the process of germination, growth, blossoming and bearing fruit; and the concept of summer in the northern hemisphere and winter in the southern hemisphere, etc. In addition, he/she will gain aesthetic education, learning the concept and cognition of beauty and experiencing the process of learning, finding, enjoying, and creating beauty in a wonderful world full of imagination, which can greatly improve their image-thinking ability; and interdisciplinary education, such as learning languages in math class, including how to describe the stories, characters, and events, how to use language, etc. These are all permeated in the learning of mathematics without taking up extra time. This kind of effortless learning of added value with minimal time is only available in SmarterKids.

Fourth, through the immersive method and guidance, and encouragement in the courses, children will not only be interested, in increasing the length of their concentration but also gradually form the habit of initiative learning, so that parents no longer need to force and urge their children to learn. This results in a lifelong benefit to your children.

It's safe to say that the SmarterKids program produces amazing results and has distinctive features. It can effectively solve the traditional problems, such as children's fear of learning, fatigue associated with learning, and simply their inability to learn. There is no doubt that children's behaviors in learning will show a remarkable change through systematic learning at SmarterKids.

Genius can be nurtured. As long as your children are not born with serious physical defects, it's possible to raise the most ordinary children to be enviable geniuses through the powerful execution of effective learning methods and systems.

More details on course content and inspiring demonstrations can be found on the official website.

As an educational company based on web3.0 and taking the metaverse as the direction of development in the emerging industry, the SmarterKids elite program, with its teaching methods of top teachers and excellent teaching materials, brings great possibilities for a bright future for our children. And its systematic education results in magical effects on children's personalities, which is more important than knowledge.

"Children can learn with SmarterKids anywhere, anytime. The first-class teachers and fascinating animated stories of the SmarterKids program have completely won the hearts of parents and children. On the one hand, parents are relieved of the trouble of forcing their children to study and spending a lot

of time tutoring them, plus they may not have enough knowledge to tutor effectively. On the other hand, children are allowed to play because they are learning while they play. And children are immersed in the lively and interesting courses, which turns their fear of learning into enjoyment. Children will also become more responsible by taking on roles in the story. And, children with a poor ability to distinguish between right and wrong will learn integrity and kindness from the characters in the stories. All of this provides consumers with more flexibility in their schedule inside and outside the family as well as positive all-around education.” Kevin, the COO of SmarterKids, commented: “Forming a good habit that will last throughout their lives through systematic learning is an investment that reaps tremendous rewards. It is this philosophy of cultivating millions of children and enabling them to become global talents in the future that drives us to offer competitive courses of high quality to consumers who need them. I hope that one day we will see every family enjoy the most innovative and meaningful curriculum and the most enjoyable child-learning phenomenon. These families can then deliver a large number of knowledgeable talents to society at large. For now, I'm glad to bring some much-needed innovation to the field.”

About Silicon Valley SmarterKids Technologies

Silicon Valley SmarterKids Technologies is a high-tech teaching and research company focusing on children's online education. Its team is composed of top early-childhood education experts and teachers from China and the United States, as well as technical talents from famous schools and enterprises. The innovative courses developed by them are in line with children's psychology and feature high technology. Compared with other companies' educational products, SmarterKids online classes are more efficient and innovative. The "Self-motivated Learning Method" created by SmarterKids Education Alliance is of great value to children aged 3 to 12 years old. Not only can they learn the curriculum with pleasure, but the initial learning habits formed through systematic training can be used for a lifetime. We insist on courses with top teachers and affordable prices, so that children from average families can also attend high-level classes. The primary teacher of SmarterKids is an expert in early childhood education from the world-renowned Stanford University and Columbia University, and the teaching and research team is composed of top education experts. These valuable concepts and rare teaching resources are some of the biggest advantages that set SmarterKids apart from other companies, and this is why they are so popular.

Currently, we offer the following curriculum: math lessons taught in Chinese or English, zero-base Chinese lessons (taught in English), preschool Chinese lessons for children with basic knowledge (taught in Chinese and equal to the level of Chinese kindergarten), and elementary Chinese lessons for children with basic knowledge (they adapt to Chinese elementary school materials and make targeted adjustments).

We believe that high-quality education should be affordable, and we strive to offer such innovative education to people of different countries, incomes, and backgrounds around the world.
