

"The Environmental Metaverse" . . . Texas company building a component to the metaverse for environmental protection

Video unveiling

Houston, Texas Mar 8, 2022 ([Issuewire.com](https://www.issuewire.com)) - What if the world had a digital twin?

Or better yet, a quantum twin, in which the data of our planet and the structures on it could be represented through a virtual model?

This is the idea of the [EnviroVerse](#), and its creation has already begun.

[EnviroAI](#) is taking the Metaverse and applying it to environmental protection.

Here's how . . .

EnviroAI is building a layer that will run on the Metaverse where customers can perform various environmental compliance, protection, and problem-solving tasks--including but not limited to . . .

- Auditing
- Modeling
- Compliance

- Inspections
- Due Diligence
- ESG Ratings
- Environmental Investing
- Permit Preparation
- Phase 1 Property Reviews
- Investigations

Key Features

Perform "on site" jobs from the comfort of your own office or home.

No longer will it be necessary to spend the resources on visiting sites in person. Conduct your environmental assessments of any facility in real-time using virtual reality.

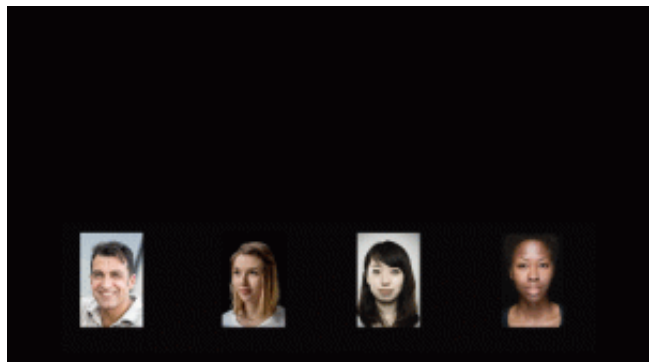

Discover a new way to collaborate.

Conduct meetings with others via the EnviroVerse. See holographic images of your partners as you work together "in person" within the digital world.

Gather more data at once than ever before. Find instant results pertaining to facilities and emissions thanks to being automatically connected to the technology at EnviroAI.
