

## Alliance Training and Testing Launches New Progressive Web App

**Nashville, Tennessee Apr 3, 2022 ([IssueWire.com](https://www.issuewire.com))** - Alliance Training and Testing has announced the launch of their new progressive web app. The progressive web app is a mobile-friendly website that can be accessed on any device without needing to download an application or even log in. This allows people with limited access to the internet, such as those who live in rural areas, to use the company's services just as easily as someone living in an urban area. Along with this announcement, Alliance

Training also launched a redesigned website for both desktop and mobile devices, allowing users to browse through all of their courses more quickly than before.

*"Alliance Training and Testing strives to provide a 5 Star Experience for our customers," says Angel Rodriguez, Alliance Training and Testing owner. "The addition of the PWA shows our commitment to our customers from the very first interaction."*

## **What are Progressive Web Apps?**

Progressive Web Apps are web applications built to work well with mobile devices and the internet. PWA's are designed with performance, security, and usability in mind. Progressive Web Apps are engaging, fast, secure, and responsive. They're perfect for users who want a mobile experience that's as good as their desktop experience. PWA's can be used on any device, regardless of whether or not it has a browser. The app will still behave like a regular website when viewed in a desktop browser.

### **Speed: Faster Load Times**

There are many advantages to using progressive web apps. First and foremost, they are lightning-fast. Progressive Web Apps can load almost instantly, regardless of the device or network conditions. This makes them ideal for use in situations where performance is critical, such as on mobile devices. Additionally, Progressive Web Apps can be installed on any device and run in any browser. This means that anyone can access them, even those who don't have a supported browser. Finally, Progressive Web Apps are secure by default and utilize modern security features such as HTTPS Everywhere.

### **Functionality: Same as a Native App**

Progressive web apps function the same as regular apps, but they are built using modern web technology. This allows them to be installed on any device and work with any browser. Progressive web apps also have some advantages over regular apps. They do not need to be installed from an app store, saving users time and money. Additionally, progressive web apps can be updated without going through the [App Store](#) or [Google Play](#). This means they are always up-to-date with the latest features and bug fixes.
