

ARX Energy : The leading crude oil and refined products midstream and downstream logistics

ARX Energy is A Crude Oil and Refined Products Midstream and Downstream Logistics, Terminalling and Refining Company in Texas.

Brownsville, Texas Apr 29, 2022 ([Issuewire.com](https://www.issuewire.com)) - [ARX Energy](https://www.issuewire.com) is crude oil and refined products midstream and downstream logistics, terminalling, and refining company in Texas. ARX is seeking to develop a crude and product storage terminal at the Port of Brownsville, Texas. The ARX Management team has noteworthy experience in the crude oil, refined products, and petrochemical industries.

The initial phase in oil and gas operations is known as the upstream operations, which includes activities involved in producing and drilling hydrocarbons in large quantities. Midstream is the second phase, and it includes the storage, processing, and transporting of natural gas, oil, and natural gas liquids to refineries. Midstream operations also entail treating the products to remove waste and compressing it before it is transported to the markets downstream, i.e., end-users. The concluding phase of oil and gas operations is downstream operations, which involve the refinement, marketing, and distribution of crude products to the consumers.

The midstream phase serves an imperative role in the oil and gas energy operations. It assists the transport of the raw crude oil produced in oil fields and transforms it into usable crude products that can be used by end-users. The midstream sector serves three main functions –transportation, processing, and logistics and storage.

The key types of companies functioning in the midstream oil operations phase comprise integrated and independent midstream companies. Integrated oil companies combine midstream, upstream, and downstream activities in their operations to make the most of every unit of oil and gas that they produce.

Independent midstream companies offer services to companies engaged in oil and gas operations that need access to midstream assets.

[ARX Energy](#) has experience in Refining and Petrochemicals Production. It has 40 years of broad refining and petrochemical operating and management experience. It has more than 40 years of environmental, safety, occupational health, and training (operations and maintenance) experience. Moreover, it has led to startups of facilities and major expansions: Aruba refinery expansion, Montreal PX facility, and Limetree Bay Refining restart.
