

## Geekoid Launches In-Game NFTs, Lays Groundwork for Massive Metaverse

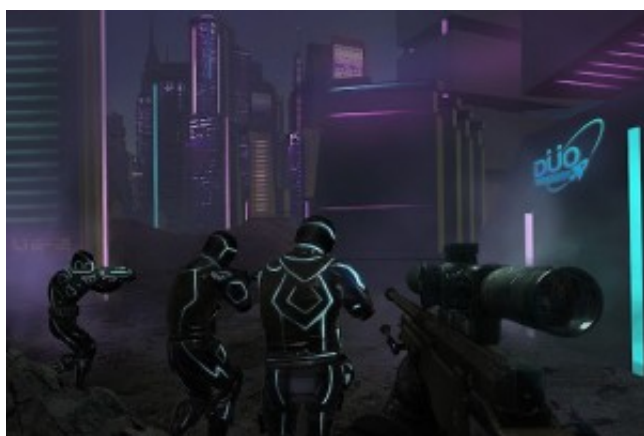

**Boynton Beach, Florida Apr 17, 2022 ([IssueWire.com](https://www.issuewire.com))** - DuoVerse's mobile game allows users to buy land and colonize space to their own specifications. Six tiers and 5,000 unique NFTS — all at 0.08 ETH — set the stage.

Rewarding users coming in at the ground floor by allowing them to join a secret cabal and even influence intergalactic wars, the DuoVerse (DV) NFT launch is providing mobile players with unprecedented opportunities.

Powered by Geekoid LLC — the same team behind DUO trading cards — DuoVerse encourages mobile players to expand their minds as they create and destroy virtual galaxies. Crypto enthusiasts and RPG fans will appreciate VMining, the mining simulator that allows players to generate VANA, an in-game currency that gives players the power to build discovery satellites.

The NFT launch is offering extraordinary advantages to players who are the first to come aboard. With Planet ownership, token airdrops, and NFT software to create User Generated Content available to these pioneers, the chances to influence the game beckon those with a sense of adventure. Members may take on the honor of hosting exclusive events for players and even initiating ticket sales. The DV will serve as a metaverse that encourages players to customize the app to their preferences. Those who love to explore space, and create their own NFTs — and even sub-mint land parcels — will undoubtedly become excited by the unparalleled amount of opportunities they will have.

As the game begins to flourish, players will desperately begin hunting various NFT platforms for the opportunity to own a land parcel and become part of something truly extraordinary. Offering revolutionaries and pirates alike their chance to become a part of the action, this magnificent metaverse promises to unfurl in unexpected and delightfully imaginative ways.
