

## How WolfWare is Helping Usher In the Future of Remote Work

**Fairfax, Virginia Apr 28, 2022 ([Issuewire.com](https://www.issuewire.com))** - WolfWare is leading the software and app development industry into the future by building [next-gen iOS Applications](#) that truly change the world, and now it's led to the world at home. While the traditional office environment is still a popular choice for many professionals, an increasing number of people are finding that remote work is a more viable option. The ongoing COVID-19 pandemic has only boosted this trend, with lockdown measures forcing employees to work from home.

In the United States alone, experts have estimated that 22% of the workforce – or the equivalent of about 36.2 million Americans – will be working remotely by the year 2025. It's clear that this trend is here to stay but unfortunately, not every company has willingly embraced it.

Many [businesses are still struggling](#) to incorporate remote working arrangements into their operations. Some have failed to invest in technology and software subscriptions, while others ignored the increased risk of employee burnout and suffered, as a result. There are also companies that underestimated the value of positive feedback and validation, which led to their workers feeling invisible.

Not every business is capable of handling the challenges of remote work, which is why they need a seasoned guide to help them out.

That's where WolfWare comes in.

Established in 2021, WolfWare is a dedicated iOS development and staffing agency that aims to revolutionize the way businesses operate. More specifically, it provides smart software solutions that address current trends, such as remote work and the labor shortage.

Both trends have their own set of challenges; however, the labor shortage is widely regarded as the most pressing issue in the United States today. It has been attributed to the fact that an increasing number of Americans are willing to walk away from their jobs, no matter the consequences.

In fact, a recent Job Openings and Labor Turnover Survey released by the U.S. Labor Department showed that there were 10.4 million job openings in August 2021, whereas the number of people quitting their jobs rose to 4.3 million.

"The [problem is not just a U.S. one](#), with many countries around the world experiencing a shortage of workers," noted Holly Ellyatt, a CNBC correspondent. "It matters because it's exacerbating supply chain disruptions around the globe, with key industries struggling to regain momentum due to a lack of workers or raw materials. This disrupts both local and global production and supply networks, hampering economic growth and causing product and service shortages for consumers."

The impact of the labor shortage reverberates throughout the entire supply chain, from manufacturers and vendors to the end consumer. Needless to say, it's a problem that affects all businesses, regardless of their size and industry.

WolfWare has recognized this and so, it strives to empower businesses by creating innovative technology solutions that can be used to resolve a whole host of problems, including the labor shortage and remote work. These also help make operations more seamless and more efficient, giving the company a significant competitive advantage.

Led by an iOS developer with years of experience under his belt, WolfWare consists of entrepreneurs and engineers who believe that giving businesses a technological edge can help them reach greater

heights of success. Not only is each member of the team incredibly talented, but they're also constantly asking for client feedback, in order to grow and develop themselves.

Whatever problem your business has, WolfWare will solve it for you.
