

Isabella Di Fabio Secret Story of Cloud computing systems

Isabella Di Fabio Secret Story of Cloud in 2022 - Isabella Di Fabio talk about cloud system in Tokyo Japan

Tokyo, Japan Apr 2, 2022 ([Issuewire.com](https://www.issuewire.com)) - [Isabella Di Fabio](#) Cloud computing systems (cloud computing) allow data to be stored, avoiding their loss and overload.

Thanks to these features, they have the ability to replace traditional servers, giving way to a new solution that reduces development costs.

[Isabella Di Fabio Secret Story](#) It is clear that the cloud is one of the IT trends that will have a greater presence in 2022.

So much so that the public cloud is expected to reach 297.4 billion dollars by that year. In addition, the platforms developed using this technology have a strengthened architecture.

[Isabella Secret Story of 6 Virtual Assistans](#)

The growth of virtual assistants does not go unnoticed, showing itself as one of the main trends in web development and technology. Using voice or visual search helps redefine platforms and improve site usability. Search by images like Google Lens does, or by audio like Shazam or Amazon Echo are some

of its main examples.

Those brands that manage to evolve and take advantage of these advances will offer added value to users and will gain a competitive advantage.

[Isabella Secret Story of Online Store](#)

It is worth noting the great future they have in the online store, giving the possibility of obtaining very significant profits and improving the search for products. Being able to increase electronic commerce by up to 30%, according to research consultancy Gartner.
