

Medicover Fertility, India Resumes its IVF Services for International Patients

New Delhi, Delhi Apr 19, 2022 ([Issuewire.com](https://www.issuewire.com)) - After a Covid-19 pandemic-induced pause of around two years, Medicover Fertility is all set to resume its regular fertility services with full capacity for its overseas patients. The demand for fertility treatments is again picking up in India as soon as the government uplifted covid 19 restrictions.

Medicover Fertility brings great news for international people looking forward to the right path of embracing parenthood. It is recommencing its services and will provide all consultation, tests, and stimulations for international males and females. Hence, now intending parents from other countries will be able to access Medicover Fertility's World Class technology, highly trained professionals, and IVF labs in Delhi, Chandigarh, Hyderabad, and other clinics.

[Medicover Fertility in India](#) strictly abides by the European standard of operating protocols which have been designed and authorised under the guidelines of ESHRE (an authority for infertility treatment in Europe). Well-equipped with ultra-modern laboratories, separate RF Technology, HEPA filters, and air purifiers, its clinics have all the facilities that will offer all sorts of advanced treatments pertaining to infertility. Therefore, our patients from abroad may experience the same standardised, ethical, and holistic form of fertility care as delivered in other countries.

Our services will range from tests, consultations, stimulations, [IVF](#), ICSI, IUI, Blastocyst Culture, Embryo glue, Fertility preservation, TESA, to PESA that will be offered under one roof. Furthermore, the highly experienced team of experts in Reproductive Medicine with distinguished expertise will be thoroughly equipped to assist both males and females with their infertility problems.

Apart from this, our doctors and staff are fully vaccinated to ensure the health and safety of our workforce and patients.

We systematically screen patients and visitors for fever, respiratory problems, or other symptoms before entering our healthcare facility and make wearing masks and gloves mandatory for all the personnel while attending patients.

Besides, we ensure proper use of personal protection equipment (PPE) by our healthcare personnel while coming in close contact with the patients and encourage sick professionals to stay home to recover faster. In addition, we will adjust our operating hours to minimise the footfall at our clinics in a particular time slot and offer a separate, well-ventilated space that allows waiting patients and visitors to be separated.

Medicover Fertility looks forward to easing your travel by making the visa, an invitation from the clinic, fit to fly certificate, stay facility, and easy transport available soon after you decide to go further with the fertility treatment after the consultation. Moreover, our team of certified fertility doctors offers personalised treatment depending on the individual situation, need, and requirement. We emphasise offering comprehensive care to our patients, driven by the aim to make it accessible for every aspiring couple.

About Medicover Fertility

With 20 Lakh happy patients worldwide, and 3000+ clinics in 14 countries, including India, Medicover Fertility has been helping countless childless to fulfill their dream of parenthood.

We believe that our patient's emotional well-being is as important as the clinical pregnancy rates that we deliver. Every professional at Medicover Fertility is driven by the notion that childbirth is a celebration and not a disgrace, which convinces us to go the extra mile in helping you accomplish your dream of becoming parents.

We understand the toll childlessness takes on couples for not getting pregnant even after trying for years. This compels our team of experts in Reproductive Medicine, Embryologists, and Counsellors to give you a helping hand and confidantes on this sensitive journey with care and compassion.

Medicover Fertility has a proven record of the highest success rate – Every 3 hours, a Medicover Fertility baby is born worldwide.
