

Qualetics Launches AI-Powered SaaS Platform for Businesses to Deliver Exceptional Customer Experience

The platform helps companies make their products intelligent by mapping product usage and customer behavior with self-learning algorithms in real-time, providing the entire organization critical insights to improve customer experience.

Washington Township, New Jersey Apr 6, 2022 ([IssueWire.com](https://www.issuewire.com)) - Qualetics Data Machines Inc. announces the launch of their new AI-powered software (SaaS) platform that helps businesses build great products, align and galvanize teams around up-to-the-second usage and customer experience insights, and grow your business by delivering intelligence needed to improve your solutions.

The AI delivers predictive and prescriptive analytics around Software Quality, Performance, Product, APIs, Business Intelligence, and Embedded AI Features in a single platform.

"Launching Qualetics is the culmination of our years of expertise creating software with exceptional customer experience in mind," said Sumanth Vakada, Founder & CEO of Qualetics. "Unlike other platforms that provide descriptive insights which are reactive, Qualetics enables companies to make software applications self-aware that proactively help users while using the product. This helps companies build products that customers love and grow their business."

Qualetics is provided in three subscription-based plans - Starter, Growth and Enterprise ranging from \$99 to \$499 per month. A 30-day free beta trial is available to businesses for the month of April. All beta participants will be offered the option to continue with the Enterprise plan at a 50% discount over your first 12 months of service.
