

Virima Announces Completion of SOC 2 Type II Certification and Expansion into U.K. and Australia Data Centers

Atlanta, Georgia Apr 19, 2022 ([Issuewire.com](https://www.issuewire.com)) - **Virima Inc.**, the innovator of Virima™ SaaS providing enterprise-grade IT automation software for Visual CMDB, Data Center, Hybrid and Multi-Cloud Discovery, ViVID Business and Application Service Mapping, IT Asset Management, and IT Service Management, announced today its successful completion of the System and Organization Controls (SOC) 2 Type II certification.

The SOC 2 Type II certification ensures compliance with the leading industry standards for managing enterprise data. The audit was performed by [AARC-360](#), an independent auditing firm, under the Statement on Standards for Attestation Engagements No. 18 (AT-C section 205, *Examination Engagements*) of the AICPA.

In order to obtain this SOC 2 Type II certification, Virima carried out an extensive and comprehensive auditing process of internal control policies and system-level operations against the five trust services criteria outlined in the AICPA Trust Services Criteria: Security, Availability, Processing Integrity, Confidentiality, and Privacy.

The audit successfully reviewed Virima's IT infrastructure capabilities, change management practices, network security, risk mitigation policies, environmental security, system operations, logical and physical access controls, and commitment to integrity and ethical values.

In addition, the SOC 2 Type II certification validates procedures, internal processes, and controls designed by Virima to ensure its unique data processing systems' confidentiality, integrity, and availability comply with applicable trust services criteria.

"Being SOC 2 Type II certified is yet another representation of Virima's enduring commitment to compliance with leading industry standards for managing enterprise data.", said SreeRam Royyala, CTO at Virima. "It also reassures our clients that data security is of utmost importance to us, and the systems, policies, and processes we have in place demonstrate high integrity."

Further, the company also announced the geographical expansion of data centers hosting Virima SaaS to serve global customers better. Now, in addition to its U.S.-based data centers, customers can choose to subscribe to Virima SaaS hosted entirely within the U.K. and Australia Amazon Web Services ("AWS") data centers.

"We are excited to offer these new hosting options to meet the performance, high availability, and governmental regulatory and compliance concerns of our increasingly growing international customer base.", said Mike Bombard, COO of Virima. "We expect an additional global expansion of our AWS data center footprint in 2022 to keep up with market demands for our best-in-class IT automation software as a service".

About Virima:

Virima Inc. is singularly focused on reducing the cost and complexities of managing enterprise IT systems and assets dispersed amongst on-premise data centers, cloud providers, corporate campuses, and remote workers. Virima™ software as a service discovers and inventories hardware and software

assets, automatically monitors each for configuration changes, and leverages machine learning to identify asset relationships and their role in supporting mission-critical business services. These dynamic relationships and dependencies are brilliantly mapped within Virima's Visual Impact Display (ViVID™).

Virima's breadth of easy-to-deploy capabilities and out-of-box integrations automates the building and maintenance of a Configuration Management Database (CMDB), enabling improved service, security, risk, and compliance management. The additional IT Asset Management (ITAM) and IT Service Management (ITSM) capabilities of Virima deliver insight and value to mid-market and enterprise clients, enabling them to address many everyday IT operations and security challenges.
