YKOFX Releases a Discussion Paper Related to the Innovative Electronic Options Market

YKOFX is putting forward a set of business visions and suggestions targeting at the development of the electronic options market

Yokohama, Kanagawa Apr 1, 2022 (Issuewire.com) - YKOFX.org, a Pan Asian exchange with an innovative and robust product suite that provides its clients with some of the best trading facilities, today announced the publishing of a discussion paper in regards to the implementation of the corresponding action to develop the electronic options market. Based on prolonged engagement with the traded options board and as a means of demonstrating the tendency to meet market expectations, the exchange is aiming at improving the electronic options market without changing the adjustability of the present options trading structure.

In order to increase the number of participants interested in the electronic options market, YKOFX considers switching from a variable quoted model to a premium quoted model which will reflect the standards of the industry and will ensure a high level of transparency.

YKOFX is looking for ways to streamline and regulate several areas of the options market structure with the purpose to accentuate the accessibility of the electronic options market. In order to be as explicit as possible with the implementation of the selected strategies, YKOFX will analyze the feedback on several spheres of development including the options expiration process, strike listing rules, and the closing price process. The exchange is expecting to receive feedback on additional issues like liquidity provider schemes, execution rules, and the introduction of new options contracts. After the total revealing of the discussion paper’s outcome, the exchange will focus on a list of after-analysis actions.

“The development planning of the electronic options market is part of our general trading infrastructure innovative project and it involves the launching of a new electronic trading platform intended to maintain and support the options trading. This is another possibility to take advantage of technology for reaching higher tops altogether with our clients”, said Daishin Kazuharu, Managing Director of Market Technology and Data Services.
