4GX with its Hyper-Deflationary Token will Revolutionize the CRYPTO Industry

New York City, New York May 10, 2022 (Issuewire.com) - Who We Are

4GX is a token with a vision to become one of the world's leading Reflection Tokens.

As a Reflection Token we intend to revolutionize the "crypto-verse", offering features currently not offered anywhere in the entire market. The primary goal is to make building wealth effortless for 4GX Purchasers. Simply hold 4GX and earn passive income without being a professional trader in the DEFI and Centralized crypto space.

The hyper-deflationary 4GX Token is revolutionizing the market while rewarding 5% of all transactions to holders!

How We're Doing

February 4th 2022: 4GX, a token which ensures that the circulating supply is constantly reducing, was **released at .00001240**.

With a **current price of .0000300943**, we have engineered our token with a max supply of **500 billion** available instead of 1 minted quadrillion available like other reflection tokens on the market. Our auto Buy-n-Burn function has a goal to reduce the number of tokens on the market creating scarcity and driving the price upwards.

What This Means for Purchasers of 4GX

Simplicity and *Usefulness* are our keywords that lead to success. That is why we are developing an entire environment around 4GX as a Reflection Token while adding utility to your purchase.

4GX is a one of a kind Hyper-Deflationary Token that is not afraid to be different. 4GX has decided to go against the industry norm by becoming the first Hyper-Deflationary Token to start the development process of their own Exchange Wallet.

"There is Nothing Impossible to them who will Try"
