

appCURE announces the "appCURE Repo"

Secure and centralised application storage and delivery solution.

London, United Kingdom May 16, 2022 ([Issuewire.com](https://www.issuewire.com)) - appCURE is pleased to announce “appCURE Repo” a modern and secure way to store, protect and deliver applications to Microsoft workspace solutions. appCURE’s latest product provides a secure market alternative as well as the ability to fully automate the update of applications using Azure Image builder. appCURE’s repo supports the delivery of applications using the following methods, Manual pull requests, Scripted actions, and Azure Image Builder (AIB). Support includes Microsoft Windows 10,11 and Windows Server 2022.

If you are looking for rapid adoption of Windows365, Azure Virtual Desktop, or other workspace solutions, look no further.

“appCURE repo has been developed to deliver application workloads with the required levels of security, management, and choice that all organisations require in today’s hybrid workspace world. appCURE has been building in security and automation to help organisations deliver their applications to their devices within days, fundamentally changing project outcomes and will continue to push the speed of application transformation message from appCURE’s Product range to help ensure faster outcomes and successful projects” Said Steve Horne – CEO
