

ARC Facility Announces latest Facility Management Software App

San Ramon, California May 23, 2022 ([Issuewire.com](https://www.issuewire.com)) - A global leader in the field of facility management, ARC Facility is renowned for offering affordable, advanced building management solutions to all business niches globally. A subsidiary of ARC, Arc Facilities leverages the latest innovations in facility management like machine learning, contextual search, IoT, artificial intelligence, and more that make its facility management app integrated and intuitive.

Previously, the Arc facility software app offered instant access to sensitive facility data like equipment locations, emergency shutoffs, As-Built Plans, safety data, O&Ms, maintenance records, and more.

At present, the company announced the latest updates in its facility management app. The CTO of the company, Mr. Rahul Roy states, "We have always believed that staying ahead of ourselves is a must when it comes to technological advancements. With countless innovations cropping up in the field of machine learning, IoT, and AI, we must ensure that our products and services feature the same. This will benefit not just the customers, but for us as an enterprise as well"

As part of ARC's latest innovations, the app is speculated to feature enhanced visual effects, instant bug fixing, and an improved UI-UX. The CTO, Mr. Roy, further conducted a session to discuss the shortcomings of the ARC Facility app.

While the results were favorable, some people claimed that they faced bugs and loading issues. To fix this, Mr. Roy, invested in up-to-date graphics, APIs, technology, and software to develop a foolproof app

that can automate, streamline, and conduct each facility's tasks under a single dashboard.

The latest updates will make the Arc Facility app extremely robust and intuitive. Consumers can locate maps and equipment locations, and also opt for custom tagging & filtering along with hyperlinking documents. Additionally, they can get quick access to compliance data, plan schedule maintenances, shared critical files, and keep each data synched in cloud storage.

Furthermore, the app's smart troubleshooting feature will instantly solve any potential lags or bugs that can make the app slow down.

Mr. Suri Suriyakumar, the CEO of the company, states, "I have complete faith in the updated [facility management software](#) of ours. Through its improved features, we hope to solve major facility issues of big buildings and make management smooth and easy."

At present, the app features are being tested and verified! By June 2022, customers can expect to download this app from their respective mobile play stores.

With such new improvements on the way, the ARC facility is gearing up to offer consistent high-quality services to a variety of government niches like healthcare, construction, corporate buildings, educational sectors & more.

About ARC Facility

ARC Facility offers exceptional facility management services to global clients. By leveraging the latest innovations in the field of facility management, ARC Facility manufactured a smart building

management app that can consolidate and configure all facility data under a single dashboard. Thanks to its accuracy and automotive features, the ARC facility is a name trusted among big conglomerates.
