

Local Specialty-Optometry Practice Clarendon Vision Development Center Expands Services, Launches New Website

New Website Serves as a Resource for Patients to Access the Most Advanced Eyecare Treatment Options in the Local Community

CLARENDON VISION DEVELOPMENT CENTER

Westmont, Illinois May 6, 2022 ([Issuewire.com](https://www.issuewire.com)) - Westmont, IL, May 6, 2022. Clarendon Vision Development Center, Chicagoland's leader in the diagnosis and treatment of functional vision disorders, is thrilled to announce the launch of its new website, www.clarendonvision.com. As a specialized,

developmental optometry practice, Clarendon Vision Development Center doctors diagnose and treat children and adults when problems with the visual system contribute to struggles with reading and learning. We also treat patients whose vision contributes to neurological symptoms like dizziness or headaches and disease of the eyes (myopia) that cause blurry distance vision (nearsightedness). The relaunch of the website aligns with the Practice's commitment to serving as a comprehensive resource for the community on the latest advances in eye care. Content features the Practice's expanded services in Vision Therapy, Myopia Management in children, Neuro-Optometry, Pediatric Optometry, and Primary Eyecare for the entire family.

The new site also introduced a better user experience with new navigation and content focused on "what we treat", online scheduling, a 24-hour online chat feature, and updated resources for patients and professional partners.

"Developmental Optometry is a less known specialty in optometric care, yet the work we do is life-changing, said Dr. Monika Spokas, Founder and Clinical Director of Clarendon Vision Development Center. Many of our patients come to us after seeing multiple doctors. They are relieved to learn that their symptoms are often related to their eyes not working well as a team and that treatment is available. Our website serves as a tool for patients to learn more about the importance of the functional visual system and how it impacts overall wellbeing. It also makes it easy for patients to access the right eyecare for their needs."

Clarendon Vision Development Center has invited visitors to explore the new website. Our monthly blog provides the latest perspective on all things related to vision development. We've also introduced a resource hub for our local professional partners in interdisciplinary fields such as Occupational Therapy, Physical Therapy, Neuropsychology, Pediatrics, Optometry and more.
