Ghaziabad, Uttar Pradesh May 5, 2022 ([Issuewire.com](https://www.issuewire.com)) - PRAGYATMIKA, India a leading skill development institution of Industrial and Professional training in E-Mobility, Li-Ion Battery Pack Designs, and Industrial Electronics for Working Professionals and Students, and TOOOPLE Technologies Pte. Ltd., a Singapore based, NOCN(UK) accredited skill development and technology aggregation company are collaborating to develop Industry ready professionals.

Using curated skill development resources and globally endorsed certifications, PRAGYATMIKA and TOOOPLE are building the future workforce talent in various Industrial domains for next-generation careers through Applied Project Development.

TOOOPLE's endorsed project development frameworks lead to international certifications that bring standardization to project mentoring and academic project development in higher educational institutions. The frameworks and methods inspire analytical thinking, and collaborative problem solving, and develop critically considered approaches to resolving challenges that improve job readiness for the current industrial environment.

TOOOPLE's certifications are available in two categories. Firstly, Mentoring Projects for Impact provides leadership and development for faculty and industry professionals at the foundation, professional and Master levels. Secondly, Applied Project Development affords students and young professionals opportunities for professional readiness, talent development and professional growth, or explorations to support seeking a career change at both foundation and advanced levels. TOOOPLE's

NOCN(UK) certified mentors help Institutions reduce their dependency on external and adjunct staff while supporting students and they assist in developing faculty skills in structured mentoring, teamwork facilitation, and program leaders while affording faculty members an opportunity to grow professional standing. The outcomes of these structured projects help employers to identify and validate the skills developed by the students.

PRAGYATMIKA will integrate the resources and frameworks of TOOOPLE's NOCN(UK) endorsed certifications in their curriculum and these will be made available across India delivered by TOOOPLE certified mentors. Students, through this collaboration, will receive access to TOOOPLE's proprietary "My Credentials" platform providing an easily sharable and globally referenceable virtual portfolio.

In a conversation with our representative, **The Co-Founder and CTO of PRAGYATMIKA, Amit Kumar Choudhary** said "Our collaboration with TOOOPLE will prepare students to learn the best industry practices while developing projects and exploring employment globally to succeed in their careers." The joint efforts of PRAGYATMIKA and TOOOPLE will enable students to curate their skills while achieving globally endorsed certifications across all relevant high technology domains. At the same time Industries benefit through enhanced access to job-ready professionals with relevant and validated skillsets.

TOOOPLE offers a comprehensive suite of skill development resources to help students gain the vital problem solving, communication, technical and business skills needed for success in today's workforce," said **Krishna Sistla, Director & Co-Founder, TOOOPLE Technologies Pte Ltd (Singapore)**, "We are pleased to collaborate with PRAGYATMIKA to help students build practical project development skills within in-demand technology areas alongside international certifications that give them a head-start before they even enter the workforce". **Andrew Crow, Director & Chief Learning Officer at TOOOPLE** added that, "providing formal credential pathways for faculty members as mentors build a community of practice with similarly validated mentoring competencies that span institutional and industry settings. With MyCredentials at the core, this facilitates both inter-disciplinary project teams and opportunities for cross-institutional and diverse industry participation within the context of existing academic or professional development programs".

Certifications in India through this collaboration will be made available from July 2022 onwards through new sessions of the PRAGYATMIKA curriculum in various technology domains. Future announcements related to this will be made by PRAGYATMIKA at www.pragyatomika.co.in with TOOOPLE Technologies activities accessible at www.tooople.com and the global certification details of NOCN(UK) available at www.nocn.org.uk.
