

25th Construction Group brings clean air and water tech, solar energy and ecofriendly construction to Costa del Sol

The newly formed '25th Construction Group' brings NASA clean air technology, next-generation ultrasonic tools for swimming pool purification and environmentally friendly construction and renovations to Costa del Sol, Southern Spain.

Benalmadena, Andalucia Jun 8, 2022 ([Issuewire.com](https://www.issuewire.com)) - Spain's Costa del Sol is famous for its fabulous climate with 320 days of sunshine a year, its huge market for luxurious second homes in the sun, and its magnetic attraction for tourists and visitors looking to enjoy the healthy Mediterranean lifestyle and relaxed way of life.

With the onset of Covid-19 and the ongoing climate crisis, many people looking for their ideal second home in the sun also want the peace of mind of clean air, clean water, and construction or renovation of their homes done in an environmentally conscious way.

According to a recent report by Deloitte, 'The construction sector is a major contributor to climate change. An overhaul is needed to both minimize the sector's impact on climate and to prepare for climate's impact on them'.

25th Construction Group was recently set up by Belgian serial entrepreneur Wim Voss and Belgian/Spanish national Gabriel Laca to set new standards for environmentally friendly construction on the Costa del Sol and to bring the latest technologies for clean air, clean water, and harnessing the power of the sun to reduce the carbon footprint.

The company offers a variety of cutting-edge products on the Costa del Sol for the first time. These include:

[Ultrasonic](#)

- A next-generation, cost-saving high-tech tool that breaks down the biofilm in water that is non-toxic, chemical-free, and uses a low power supply. It eliminates biofilm so algae, bacteria, and limescale cannot grow. It can be used in swimming pools, ponds, hot tubs, yachts, and much more. This results in many advantages: bacteria and toxin-free water, longer-lasting applications, reduced costs, and fewer fuel emissions

[ActivePure](#)

- ActivePure was developed for use in space exploration by NASA and has since evolved for use in commercial and consumer products to reduce exposure to pathogens, including the COVID-19 virus, bacteria, fungi, and molds, by up to 99.9% in the air and on surfaces. The technology has been tested in more than 100 independent lab studies and several live sites and its devices are currently in use in the White House and the International Space Station.

Solar Panels

- The 25th Construction Group team is working with local artists to create unique art pieces that include solar cells and work in the same way as traditional solar panels but that are not only energy-efficient but are also special and beautiful features in the gardens and outdoor spaces of their client's homes.

Existing Home Renovations

- The company specializes in renovating existing homes where clients want to use the latest technologies to bring their homes up to today's standards in an environmentally conscious way. Their first client is 'Vilaluz', a luxury yoga and wellness center being set up by Wim and his wife Ans, situated in a traditional Andalusian villa in Mijas/Marbella, where the current installations

are being upgraded ready to welcome upmarket international and local clients during 2023.

New Construction

- 25th Construction Group Director, Gabriel Laca has many years of construction experience on the Costa del Sol and Gibraltar and has worked on many eminent projects including the World Trade Centre in Gibraltar, Gibraltar Airport Terminal, Ocean Village Gibraltar Floating Hotel and apartments, the 5-star Kempinski Hotel and supermarket giant, Lidl. A full range of new environmentally friendly construction services will be available via 25th Construction Group.

According to CEO and Founder, Wim Voss

'Technology is ever-evolving and being up to date is a necessity. As a serial entrepreneur with over 20 businesses in Belgium, I am passionate about the environment and using technology to safeguard the earth's natural resources and construct them in an ecologically respectful way.'

'My mission is to set new standards for environmental construction in beautiful Costa del Sol and to use the latest technologies so our clients can enjoy clean water, and clean air, harness the power of the sun, and enjoy living in homes that are technologically advanced but that still feels like home.'

'Our team speaks Dutch, French, German, English, and Spanish so we are ideally suited to help international homeowners. We are excited to start already at Vilaluz, our luxury yoga and retreat centre and we are looking forward to creating an ecosystem with like-minded individuals here in Spain and begin working on new projects.'
