

Aarogyapay- Total health, patient first approach

Mumbai, Maharashtra Jun 15, 2022 ([Issuewire.com](https://www.issuewire.com)) - The Mumbai-based startup Aarogyapay has embarked on its start-up with a very unique and novel philosophy to prioritise patient wellbeing over everything else. Combined with revolutionary technology and propriety algorithms, AI & ML, and human intervention at all levels, Aarogyapay is an asset-light healthcare delivery network with technology, ease of use, reach, and price optimisation.

With Aarogyapay, patients have access to the right treatment at the right price with assistance from appointment booking, surgery, and post-operative care.

The founder of Aarogyapay, Debasis Samanta, highlighted that "We want to ensure that you have the right information, the right treatment and access to the best healthcare infrastructure." He also emphasised not using chatbots. We have human intervention at all levels because every human life is precious and we don't want to leave anything to chance.

Very uniquely, Aarogyapay offers price discovery and price optimisation features for patients, which sounds very promising and empowering as far as the patients are concerned. Patients will be able to search for the best prices for healthcare services like lab tests, surgeries, etc. based on their locations and choose the one suitable for them.

Aarogyapay has total healthcare with a patient-first approach as its core purpose. According to Debasis Samanta, Founder of Aarogyapay, "The wellbeing of the patients is the focal point of every product or service we build."

Aarogyapay also plans to launch its own payment system for healthcare which will be dedicated only to healthcare payments and will offer the ease of making payments with loyalty rewards, savings on the actual healthcare expenses, and special savings plans for planned treatments.
