

I18n & Localization Technology Leader Lingoport Announces Its Latest Release

Boulder, Colorado Jun 30, 2022 ([Issuewire.com](https://www.issuewire.com)) - Lingoport releases significant updates to its suite of software, helping development teams and enterprises reach worldwide customers with internationalized and localized software in every sprint and release.

Lingoport Suite includes:

- Globalyzer for continuous internationalization (i18n)
- Localizer “No touch” automation from software repository to the translator and back again, with management, transforms, quality checks, and no developer hassles.
- LocalizerQA automates linguistics review of web, mobile, and desktop applications in context without requiring developer assistance.

See <https://lingoport.com/products> for an overview as well as specific product pages.

What’s New: With this suite release, code-named *Japan*, new features are highlighted:

Localizer:

- Further Localization files control and clean up
 - “Ghost” Key/ID strings management
- New integration with RWS Trados Enterprise
- Enhanced localization kit and file control for XTM integration
- Custom email templates for project notifications

LocalizerQA:

- Global Replace of selected strings across files and projects during localization review
- New statistics tracking for translations and reviewers

Globalyzer: security enhancements

“This release adds important features that help localization teams keep up with the velocity of development teams while increasing the quality and flexibility of how they get their work done,” stated Olivier Libouban, Lingoport’s VP of Product Development.

Security improvements, including fixes for Log4J vulnerabilities, are included.
