

New Force, New Level Of Cryptocurrency Exchange - Bitutong

In recent years, with the continuous development and application of blockchain technology, the blockchain-native digital assets represented by cryptocurrencies have gone to the masses, and people have also shifted from doubts to investment layout.

Vancouver, British Columbia Jun 24, 2022 ([Issuewire.com](https://www.issuewire.com)) - Bitutong cryptocurrency exchange came into being under such circumstances. The platform was established in 2020 and has obtained MSB licenses in Canada and US, and implements safe and compliant operations! At present, it has become a strong new force in the market with its five characteristics of safety and compliance,

professional efficiency, top risk control, flexible transaction, and rich currency. With these, it will bring users to a new level of high-quality services.

Build a safe and compliant trading system to avoid regulatory risks

When faced with a large number of cryptocurrency exchanges, users often worry about how to distinguish between the pros and cons and find the platform that suits them best. At present, digital assets have attracted regulatory attention around the world. Judging from the compliance constraints implemented by regulators on cryptocurrency exchanges, security should be the first element of our choice in trading platforms. As a legally registered company, Bitutong is committed to providing users with a reliable investment environment and adheres to the laws and regulations of the US Securities and Exchange Commission to protect users' assets.

Create professional and efficient services to make investment easier

Bitutong is committed to creating a secure and convenient cryptocurrency trading platform for users and providing a brand new investment experience. In terms of use, Bitutong designs the interface as a concise and clean platform with clear functions and is user-friendly. Each function on the page has detailed descriptions and instructions. Switching between markets is also simple to navigate for non-native English speakers and beginners.

How to create a Bitutong account online? It is simple, you only need to download the Bitutong app on your mobile phone, then select the registration on the page, and enter your email address, password, first name, last name, country, and mobile phone number. After submitting the information, the registration will be successful. After creating an account, select "Account" in the upper right corner to access your wallet and start trading directly. If you need to deposit or withdraw funds, just open the Bitutong platform, select "Asset" at the top of the page, select "Deposit" or "Withdrawal" under "Tokens", paste or enter the deposit address or withdrawal address, select "Submit" and you are done.

While using the platform, users often encounter problems, and Bitutong provides a professional and efficient solution in this regard. For example, 24 hours and 7 days available customer service for email support, FAQ, and a comprehensive knowledge-based article has been established to provide answers to users' various questions. If contact us at our Twitter account (@bitutong), we will reply within minutes.

Establish a top-level risk control strategy to ensure the safety of user funds

Bitutong combines a variety of advanced security measures to establish a top-level risk control strategy to ensure the safety of user funds. First, when a user signs up for Bitutong, the account automatically gets two digital wallets, one for cryptocurrency and the other for fiat currency. Users can choose to deposit or withdraw funds from either wallet. Not only that, but users can also set up two-factor authentication methods to help ensure the security of transactions on the platform.

In addition, to ensure transaction security, Bitutong adopts a flexible multi-stage wallet strategy, which stores 80-90% of the user's funds in cold wallets, and the remaining funds are stored in hot wallets for daily transactions. This strategy can ensure the security of user funds to the greatest extent. Even if they are cyberattacked by hackers, the funds in the cold wallets are safe.

It is worth mentioning that Bitutong is a decentralised wallet, which means that users have complete control over their private keys and full ownership of their crypto assets. All the users' private keys are encrypted with multi-layer cryptographic functions and cannot be decoded. Only the user can use crypto

assets. To ensure the security of the user's identity, Bitutong will not collect or store any personal information of the year, will not access or transfer the user's crypto assets, or even see the user's assets on Bitutong. More importantly, users can dispose of assets even without using Bitutong so they do not have to worry about the security of funds.

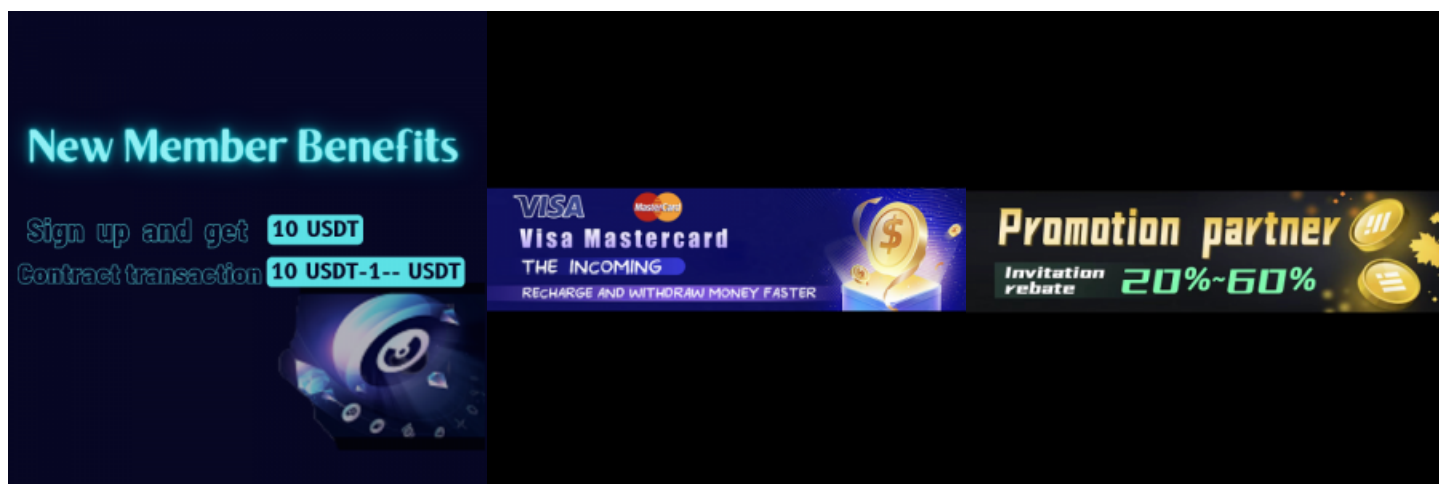

Platform order types are diverse and transaction methods are flexible

As an in-depth participant in the digital currency industry chain, digital currency exchanges are the main places for digital currency trading circulation and price determination. Currently, Bitutong offers four main types of orders such as limit orders, market orders, stop-loss limit orders, and take-profit limit orders, to buy or sell at the best available prices. Users can choose according to their different needs. They do not need to be online for a long time. They only need to set the purchase price and automatically complete the transaction after reaching the purchase price. Bitutong does not charge any fees for limit orders but charges 0.01% of fees for market orders, stop-loss limit orders, and take-profit limit orders.

Supports multi-currency business without using multiple wallets

There are endless cryptocurrencies on the market, and using multiple wallets can be a real hassle. It would be much more convenient to put everything together. Bitutong can support more than 40 blockchain networks at the same time, which means that it supports hundreds of thousands of crypto assets and tokens. In addition to the top three cryptocurrencies such as Bitcoin, Ethereum, and Ripple. Bitutong also supports ZEC, DogeCoin, Litecoin, BitShares, ybcoin, Peercoin, and other familiar cryptocurrencies in 2022. There are hundreds of thousands of niche crypto assets and tokens.

If you used to struggle with how to choose a cryptocurrency exchange, now you should understand that of course there should be Bitutong installed on your mobile phone! Safe and compliant, professional and efficient, top-level risk control, flexible transactions, rich in currency, and a large number of practical functions. Download and experience it now! In the future, Bitutong will continue to improve platform management, strengthen risk control measures, provide a higher level of service at a lower cost than many other platforms, and provide a fair, efficient, and participatory blockchain financial investment platform for every user. All-round, multi-dimensional, one-stop to bring users an immersive crypto asset service experience!
