

Nicole Psomas, PT, MLD/CLT, a Physical Therapist & a Certified Lymphedema Therapist

Get to know Physical Therapist & Certified Lymphedema Therapist Dr. Nicole Psomas, who serves patients in New York & New Jersey.

New York City, New York Jun 16, 2022 ([Issuewire.com](https://www.issuewire.com)) - Dr. Psomas is a licensed New York and New Jersey board-certified physical therapist and a certified lymphedema therapist. In 2003, she graduated with a Master's degree in Physical Therapy and Health & Science from Thomas Jefferson University in Philadelphia, Pennsylvania. After graduation, she moved to New York City and was hired

at New York-Presbyterian/Weill Cornell Medical Center, where she works to date.

At Cornell, she has an extensive resume working with patients of varied populations including post-surgical, reconstructive plastic surgery, bariatric surgery, neurosurgery, neurology, traumatic brain injury, spinal cord injury, cardiopulmonary, general medicine, hemophilia, oncology, orthopedics, psychiatry, pediatrics, transplant surgery, urology, vascular, women's health, inpatient rehab unit and intensive care units. She held the position of Clinical Specialist for the Trauma, Surgical, and Medicine Service.

Nicole also has a specialty and extensive resume in the area of pediatrics, treating children of all ages, including newborns in the NICU. She can also be found on staff at Abilities Therapy Network, a pediatric therapy center for all ages and ability levels, in Midland, New Jersey.

Since 2004, she has also treated many patients recovering from reconstructive plastic surgery, working hand-in-hand with famed New York City surgeons. In 2010, Dr. Psomas made the decision to have an elective cosmetic procedure done with New York City Plastic Surgeon, Dr. David Shafer, MD. With minimal information on rehabilitation after cosmetic plastic surgery, she instinctively used the skills practiced on a daily basis to facilitate healing and improve her appearance. Dr. Shafer was astounded by her results and asked her to share her secrets for a fabulous recovery. This sparked a referral service where, to date, she has been treating his patients, implementing techniques, and educating individuals on how to take recovery into their own hands.

As a result, she has developed her own unique recipe for recovery, which she calls "After The Cut - The Psomas Method." She has even written a book titled "After The Cut: How to Prepare for and Recover From Cosmetic Plastic Surgery," which can be found on Amazon.com and BarnesAndNoble.com

With first-hand experience, Dr. Psomas understands the journey a patient will embark on after surgery, both physically and psychologically. Because this transformative time is a very sensitive one, the confidentiality and discretion that she maintains are amongst the highest factors for ensuring her great reputation. Over the past several years, she has treated patients from all over the world, from high-profile executives to Hollywood celebrities.

A pioneer in recovery after cosmetic plastic surgery, Dr. Psomas remains dedicated to furthering her education, taking courses to advance her skills, and developing a protocol specific to the elective plastic surgery population. Her professional memberships include the American Physical Therapy Association, the National Lymphedema Network, the Hellenic Medical Society of New York, the Hellenic-American Chamber of Commerce Young Professionals, the Daughters of Penelope, and the American Society of Plastic Surgeons.

Physical therapy (PT), also known as physiotherapy, is one of the allied health professions that, by using evidence-based kinesiology, electrotherapy, shockwave modality, exercise prescription, joint mobilization, and health education, treats conditions such as chronic or acute pain, soft tissue injuries, cartilage damage, arthritis, gait disorders, and physical impairments typically of musculoskeletal, cardiopulmonary, neurological, and endocrinological origins. Physical therapy is used to improve a patient's physical functions through physical examination, diagnosis, prognosis, physical intervention, rehabilitation, and patient education. It is practiced by physical therapists (known as physiotherapists in many countries).
