Our experts are ready to answer any questions or address any issues you may have within minutes!

Steps to getting your website up on a VPS server

- Purchase your VPS. This usually entails paying a monthly or yearly fee to receive, manage, and use your virtual server with all its benefits. There are many different plans to choose from based on what you want to do with your site and what resources you need. If you're not sure how much space or bandwidth you'll need, ask your web host for help choosing a plan that will work best for you.
- Sign up for an account with your chosen provider if necessary. Many providers have signup forms that will require information about yourself and payment details so they can create an account specifically for you and your website.
- Install WordPress on your new VPS. After you've created an account, log in to it and go through any setup procedures required by your provider. Then download WordPress (if it isn't already installed) and install it onto your new server using these instructions.
- Create a MySQL database in cPanel. Once you've logged into your cPanel, find MySQL Databases under Databases.
- Connect WordPress to your database. Now we'll connect WordPress to your database.
