Wall, New Jersey Jun 17, 2022 ([Issuewire.com](https://www.issuewire.com)) - Are you missing teeth in your smile? Interested in a treatment option that can replace missing teeth and restore your smile? At the practice of Dr. Susan J. Curley, we are proud to offer [dental implants near you](#) for our patients that are interested in a more permanent and secure solution when it comes to replacing missing teeth.

About Dental Implants

Not sure if dental implants might be right for you? Feel free to schedule a consultation with our [dentist in Wall Township, NJ](#); we'd be more than happy to determine if you are a candidate for implant dentistry. Dental implants are a newer treatment that has quickly become one of the most popular treatment options for replacing missing teeth. Unlike other options, dental implants are surgically attached to the jaw, making them a part of the patient. Dental implants comprise three parts, the implant, the abutment, and the prosthetic.

The implant is tiny, post-surgically attached to the jaw, and made from titanium. Titanium can bond with the bone, ensuring the implant is extremely secure. The abutment is attached to the implant once the area has healed and allows the prosthetic to be secured to the implant. The prosthetic is the artificial tooth/teeth that are attached. Dental crowns, bridges, partials, and even dentures may be used depending upon various factors.

Benefits of Dental Implants

When it comes to replacing missing teeth, dental implants have many benefits over the alternative options, including:

- Dental implants look, feel, and function just like a natural tooth.
- Dental implants are designed to blend with any existing natural teeth.
- Dental implants require no dietary restrictions.
- Dental implants require no adhesive pastes.
- Dental implants prevent complications associated with missing teeth.
