

UCC INDU GmbH has enough inventory Coping With Chip Shortage in 2022

UCC INDU GmbH has enough inventory as chip shortage continues in 2022

Ladenburg, Baden-Wurttemberg Jun 9, 2022 ([IssueWire.com](https://www.issuewire.com)) - UCC INDU GmbH was founded in 2015, specializing in the electronic components distribution business. The accurate quotation, excellent credit, reasonable price, reliable quality, fast delivery, and authentic service, it has won the praise of the majority of customers.

UCC INDU GmbH has a wide and unobstructed channel supply source, reserves a large number of electronic components inventory, and reserves a large number of electronic components inventory including all categories of products such as: optical devices, embedded systems, semiconductors, consumer electronics, and others. Distribution brands include CYPRESS, SAMSUNG, STM, MICRON, BROADCOM, FREESCALE, TI, ATMEL, AD, ALTERA, XILINX, etc. Additional information can be found at uccindu.de.

Continued chip shortage in 2022

In 2021, the global chip industry is in a short supply. The price of all types of chips has increased to some extent. In 2022, in the short term, the chip supply problem still has not been fundamentally alleviated. It is expected to be able to get some relief at the end of this year. Chip prices ultimately depend on the overall development of the global supply chain.

Chip shortages will continue to plague the electronic equipment supply chain in 2022, and the different semiconductor device types in the major electronic equipment markets have different impacts. As production enters the off-season coupled with the market semiconductor supply increases, most of the shortage of semiconductors in the field of personal computers and smartphones will be alleviated.

MCU, one of the protagonists of the chip supply shortage, is searched hot. It has not been relieved by the shortage of supply and demand situation. Although several MCU manufacturers around the world have started to expand production, many factors such as recurring epidemics, raw material shortage, and capacity grabbing by digital products such as computers and cell phones have further aggravated the tight supply and demand of MCU chips for automotive applications. Renesas, Infineon, NXP, STMicroelectronics, and other companies have almost filled their orders for automotive MCUs in 2022, and there is constant news of price increases.

About UCC INDU GmbH

UCC INDU GmbH newly established in 2015, is an independent distributor of electronic components located in Ladenburg, Germany. Our greatest motivation is to be a solid bridge between leading manufacturing factories and European clients, providing them with cost-effective, top-quality solutions. With high-quality service, UCC INDU GmbH has successfully been supplying the automotive, medical, industrial, automation, telecommunications, data technology, and aerospace industries with their specific requirements.
