

WireMin - A Social Network to be The REAL You

It's time to ditch the Web2.0 social networks! WireMin aims to build the next frontier of social network enabling completely free speech and privacy across all customizable Spaces.

The graphic features a blue and green gradient background with concentric circles. On the left, a man sits on the floor with a laptop, and a woman stands holding a large blue plus sign. In the center, there are green 3D blocks with an 'Enter' key and a paper airplane. On the right, the text 'WireMin A Social Network to be The REAL You' is displayed in green and black. Below the text is a search bar containing 'https://wiremin.org/' and a QR code with the caption 'Scan this QR Code to Download WireMin'.

Los Angeles, California Jun 28, 2022 (IssueWire.com) - WireMin, a decentralised social network dedicated to freedom of expression, has released a new feature offering customisable open groups for communities and friends called “[Space](#)”. **It marks a milestone that WireMin is leading towards a Web3.0 native social network that puts people firmly in control of their identities and regains digital ownership.**

Created with a core belief in **freedom of expression**, WireMin Social Network empowers users to speak freely, chat securely, and discover and enjoy the fun stuff with their communities. At [WireMin](#), users can **share anything** from secret chats, and secret videos, to large files with friends and communities. The new feature, Space, serves as a free, exciting, and the innovative public square to form authentic connections between the users with their loved ones and interesting souls who share the same passions and tastes.

Since its launch, the Spaces on WireMin have seen increases in the numbers and ranges of topics, Spaces on the topics of [friends-making](#), Crypto, NFT, cute cat memes, and trending news topics are among the top hits.

What makes this app unique is its stable and reliable [communication foundation](#). Based on an integration of the latest technologies and protocols, WireMin innovatively leverages **a peer-to-peer network with UDP (User Datagram Protocol)**. It offers lightweight and low-latency transmission which allows deep customization and optimization for better efficiency and security of the WireMin network. UDP further evolved into HTTP/3 which is considered the next-generation communication

protocol for the internet and is now in its final phase of standardisation by IETF (The Internet Engineering Task Force).

Privacy is a user's fundamental right and WireMin ensures **a private and secure environment** by leveraging 256-bit AES, Ed25519 as well as SHA256. Offering privacy-by-default as the solution for digital privacy empowers users to take control of their data and eliminates the possibilities of mass surveillance or censorship.

Furthermore, in the [WireMin](#) bitcoin-like decentralised network, all accounts are equal, created based on users' devices, and no central servers or third-party trackers. No one has the privilege to suspend or interrupt any account or moderate any user's content. The self-sovereignty principle puts users in control of their identity and data ownership, ensuring free speech is inevitable, not a choice.

“In a world of tech giants adopting centralised and algorithm-dominant tactics. There's a surging outcry for online freedom. WireMin leverages an anonymous, private by default, and decentralised structure. There's nothing in the Web2.0 social network spaces now that ticks all these boxes,” said Baron Swartz, WireMin's lead developer. “It's also a great showcase for how freedom of speech can help us create a better world.”

Appealing to internet freedom enthusiasts and tech-savvy professionals, this app has received worldwide downloads and recognition since its launch. This app is available to download for free on [Android](#) or [iOS](#).

About WireMin

WireMin is a decentralised social network that is dedicated to full freedom. It aims to build the next frontier of social networks enabling completely free speech across customizable communities.
