

All About Dreamcloud Psychiatry And Its Founder, Chris Lee.

Los Angeles, California Jul 21, 2022 ([Issuewire.com](https://www.issuewire.com)) - Today, the world is moving fast and humans are also running after it to keep up with its pace. Everyone wants to do something to stand out in this fast-moving world. This all needs a constant hustle. We stop to care for ourselves. This all starts at a young age, and in this race, no one has the time for themselves. All of these lead to mental health issues. Among all the other health problems one suffers, mental health issues are the ones that are neglected the most. A physical troll on the body can easily be seen or detected, but it takes time to realise that our mental health is draining and people push it away by thinking about who has the time to sit in a

therapist's office for long.

Well, you can put all of this behind you with DreamCloud Psychiatry. DreamCloud Psychiatry is an online, subscription-based practice that gives patients “unlimited” visits and follow-up care virtually, via cloud, text, email, phone, and through a customized app. We sent all prescriptions electronically anywhere in Florida (and New York).

Chris Lee is the founder of DreamCloud Psychiatry. He started it in the year 2017. When Lee went to school again to pursue his career in nursing, he was a Baptist Health scholar and worked in an oncology unit at South Miami Hospital. This drew me toward a career in mental health, and I went to NYU to become a psychiatric nurse practitioner.

From DreamCloud Psychiatry he wanted to create something that the younger generation could enjoy and get attracted towards. And we can surely say he succeeded in doing so. Lee's primary focus group was those who care for their mental health and know its significance but can't come and sit or wait in long lines in clinics. So he made it all easy for them.

DreamCloud Psychiatry is the kind of virtual mental health buddy that this generation needs.
