

LIOcoin: LIO 2.0 nearing completion - Binance smart chain to be integrated into LIO 2.0

LIO 2.0 is nearing completion and offers a wide range of applications in the NFT market. The Binance Smart Chain will be integrated into the existing blockchain. Difficulties with some exchanges with the LIOcoin will be cleared out with LIO 2.0.

Chesterfield, Derby Jul 13, 2022 ([Issuewire.com](https://www.issuewire.com)) - After a development time of more than one year, LIO 2.0 is now close to completion. The main application area is the DeFi sector and NFT market, in which LIO 2.0 opens up numerous possibilities and brings with it improvements. As a growth market, the NFT market will benefit from LIO 2.0 in the future. Difficulties that some exchanges still had with LIOcoin will be eliminated with LIO 2.0.

Completion of LIO 2.0 is scheduled for September 2022

LIO 2.0 is now nearing completion after a development period of just over a year. Further development based on LIOcoin brings some changes and improvements. The NFT market is the main application area of LIO 2.0, with a wide range of possible applications arising with in-game payment NFTs, Pay to Earn, or Play to Earn in the Metaverse. Requests for Metaverse projects to integrate NFTs have already been received.

NFT market as a growth market

The NFT market is a growth market because there are always new projects that can be tokenized with it. In the future, LIOcoin will benefit from the NFT market. Expectations are that the global non-fungible token market will reach \$211.72 billion by 2030. A CAGR of 33.9 percent is expected from 2022 to 2030.

Binance Chain integrated into existing blockchain

Binance Chain will be integrated into the existing blockchain at LIO 2.0 to provide better traceability in liquid markets. LIO 2.0 has further developed the low-energy Proof of Stake (PoS) consensus mechanism, so LIO 2.0 will move to Proof of Authority through BSC integration. Proof-Of-Authority (PoA) is a consensus method that gives a small, fixed number of blockchain actors the authority to validate transactions or interactions with the network. Another benefit of BSC integration is that LIOcoin is automatically listed on multiple exchanges. As was evident from recent newsletters, the listing on the p2pb2p exchange has been delayed due to technical circumstances. Some exchanges have difficulties with the token standard LIOcoin, as it is based on a specially developed blockchain. We now know the solutions and will do the listing on p2pb2b and other Exchanges with some delay with the launch on LIO 2.0.

Those who want to take advantage of LIO 2.0 should get informed and join now.
