

## REX NFT Partners with Multiple Organizations for Token Offering

Renewable energy credit NFTs. When you buy a REX NFT, you are directly funding the generation of renewable energy that will be used in the power grid.

**Washington, D.C, District of Columbia Jul 11, 2022** ([IssueWire.com](https://www.issuewire.com)) - REX NFT is a renewable energy credit NFT and cryptocurrency project on Polygon and BSC. Our NFTs are real renewable energy credits and represent 1,000 kWh of renewable energy. When you buy a REX NFT, you are directly funding renewable energy that will be used in our electric grid. We are also launching our token, REX Coin. REX Coin will be used in our REX World Metaverse and in our dApp/tokenized REC Marketplace. We are creating a consumer market for tokenized renewable energy credits.

REX NFT has partnered with several organizations over the last couple of months. Some have been for climate action efforts, and others have been for various crypto and blockchain services such as staking, yield farms, cross-chain bridge, and more. Here are our partners:

**KlimaDAO** — We partnered with KlimaDAO to offset our carbon footprint from mining NFTs and token transactions by buying tokenized carbon offsets. <https://klimadao.finance>

**Ethica** — We partnered with ethica because they are a digital exchange platform that utilizes Blockchain technology to connect ethical investors with Environmental, Social, and Governance (ESG) initiatives around the globe. We will be listing our REX Coin on their exchange in August. <https://ethica-x.io/>

**Multichain** — We partnered with Multichain because they are a leading cross-chain router protocol. They built our Polygon/BSC bridge. Now REX Coin is officially a multi-blockchain token! <https://multichain.org/>

**Gysr** — We partnered with Gysr to build our yield farm on the Polygon network. <https://www.gysr.io/>

**Polaris DeFi** — We partnered with Polaris DeFi to build our yield farm on the Binance Smart Chain (BSC), as well as another yield farm on Polygon. <https://www.polarisdefi.io/>

**CoinSwap Space**— We partnered with CoinSwap Space to build and host a second yield farm on the Binance Smart Chain (BSC). <https://www.coinswap.space/>

**TerraPass** — TerraPass is a leading provider of eco-assets and renewable energy credits. We partnered with TerraPass because they provide us with verified Renewable Energy Credits (RECs). <https://terrapass.com/>

**Green-e** — Green-e is an eco-asset certification organization. They ensure that none of our renewable energy credits have been double issued, and are truly backed by 1,000 kWh of renewable energy. <https://www.green-e.org/>

**NFT Catcher** — We partnered with NFT Catcher because they are a leading NFT club. They help us market and spread awareness about REX NFT. <https://www.nftcatcher.io/>

**DX Sale** — DX Sale is a leading token sale/IDO platform. We partnered with DX Sale to host our IDO/token sale. <https://dx.app/>
